Two Principles for Coinduction

- Tarski's Fixed Point Theorem
  + Simple & Robust
  - Inconvenient to use

- Syntactically Guarded Coinduction
  - Complex & Fragile due to "Guardedness Checking"
  + More convenient to use

Our Contribution

- Parameterized Coinduction
  + Simple & Robust
  + Most convenient to use

Key Idea

Semantic Guardedness

- Parameterized Coinduction
  - + Simple & Robust
  - + Most convenient to use

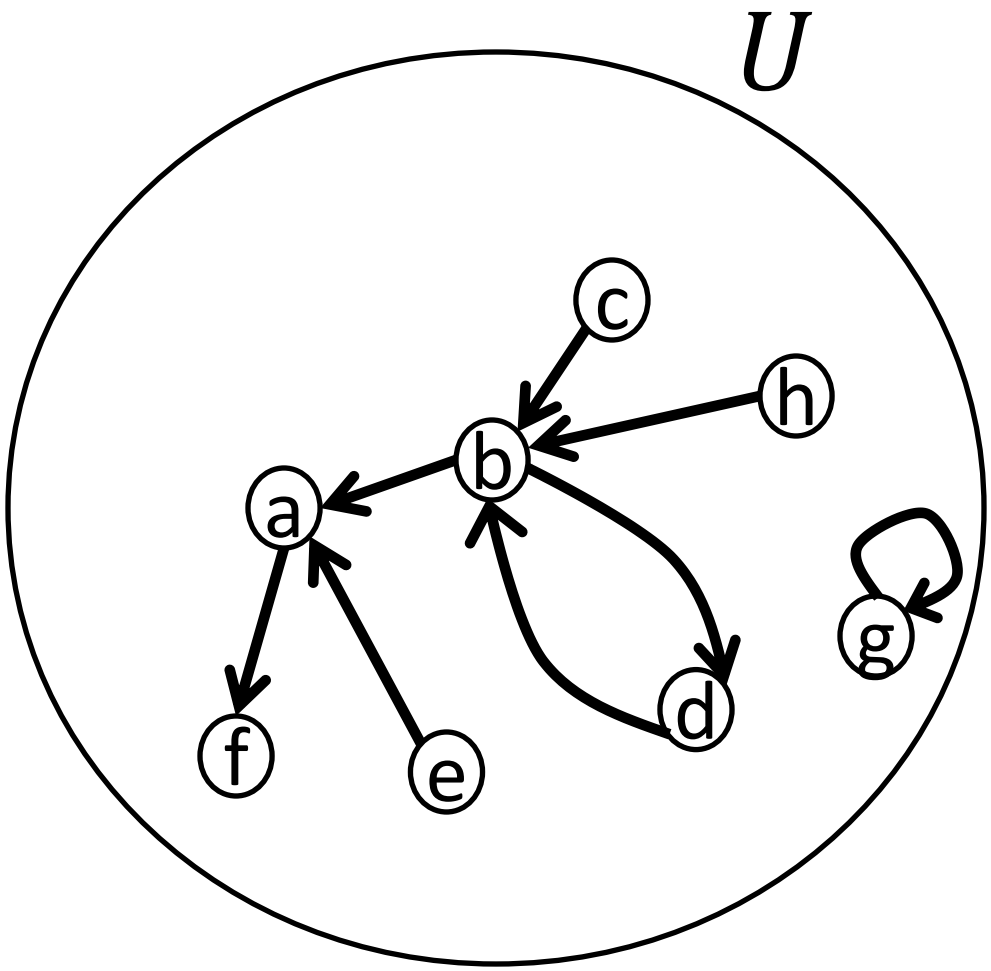
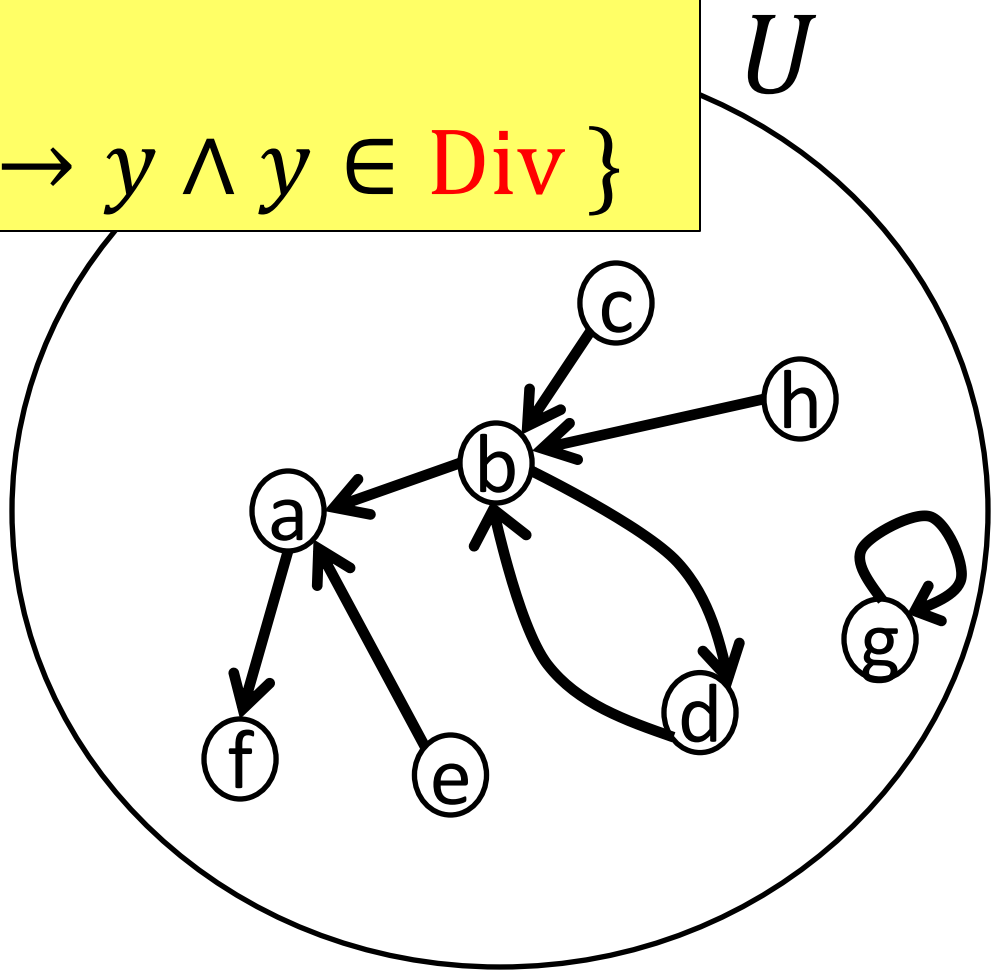
Example of Recursively Defined Set: Divergent Nodes in STS



Example of Recursively Defined Set: Divergent Nodes in STS

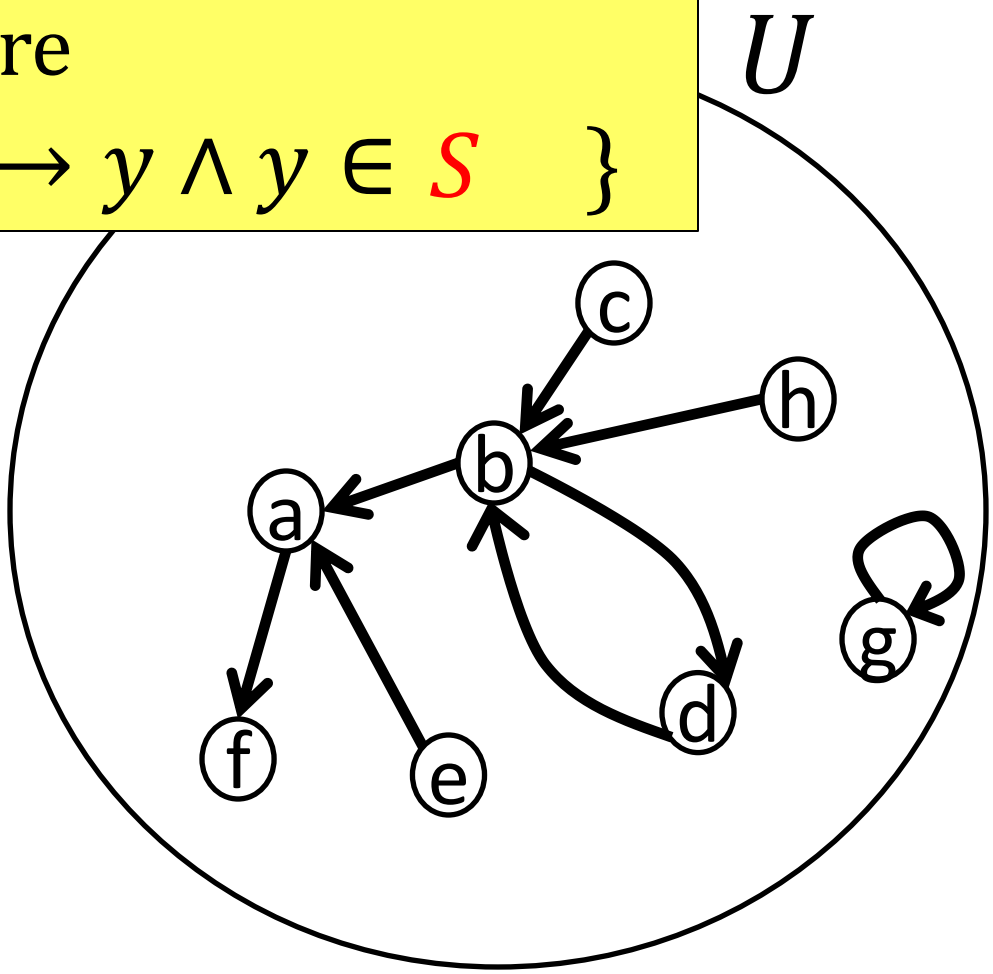
$$\text{Div} = \{\, x \mid \exists y.\ x \to y \wedge y \in \text{Div} \,\}$$



Example of Recursively Defined Set: Divergent Nodes in STS

$\mathrm{Div} = f(\mathrm{Div})$ where

$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$

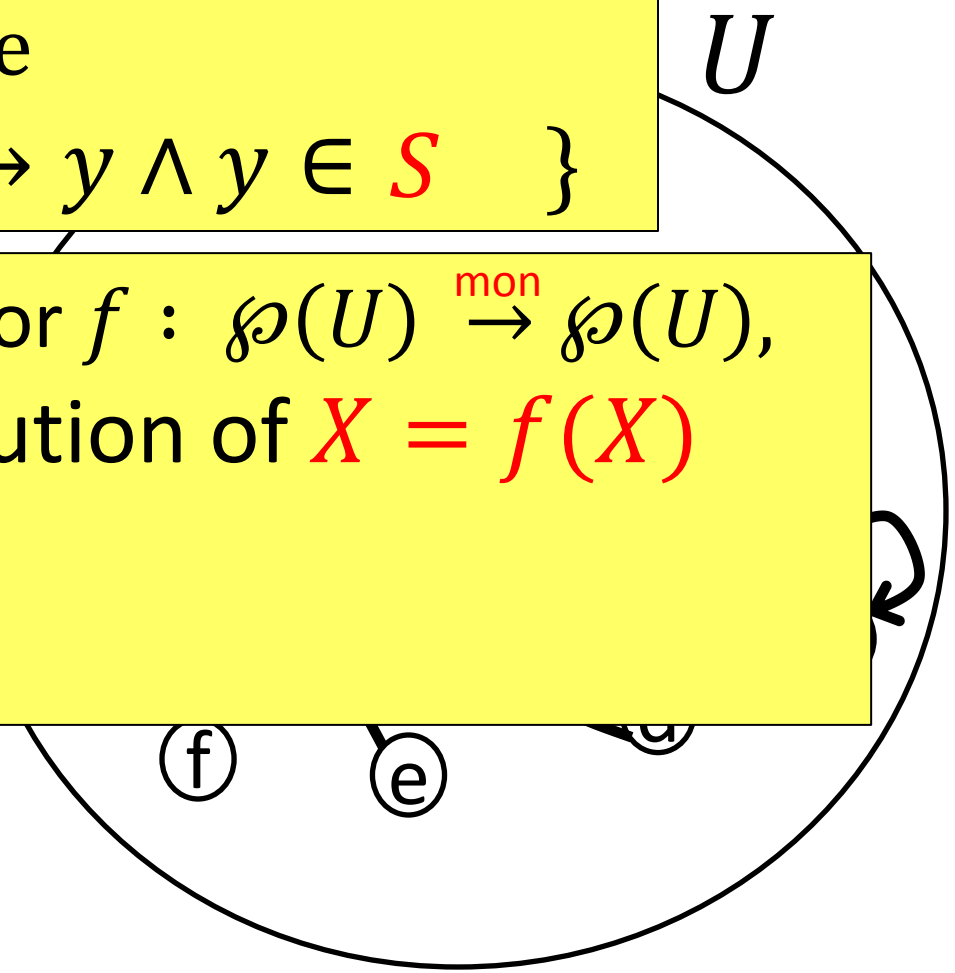


Example of Recursively Defined Set: Divergent Nodes in STS

$\mathrm{Div} = f(\mathrm{Div})$ where

$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$

(Tarski's Theorem) For $f : \wp(U) \overset{\text{mon}}{\to} \wp(U)$, νf is the greatest solution of $X = f(X)$



Example of Recursively Defined Set: Divergent Nodes in STS

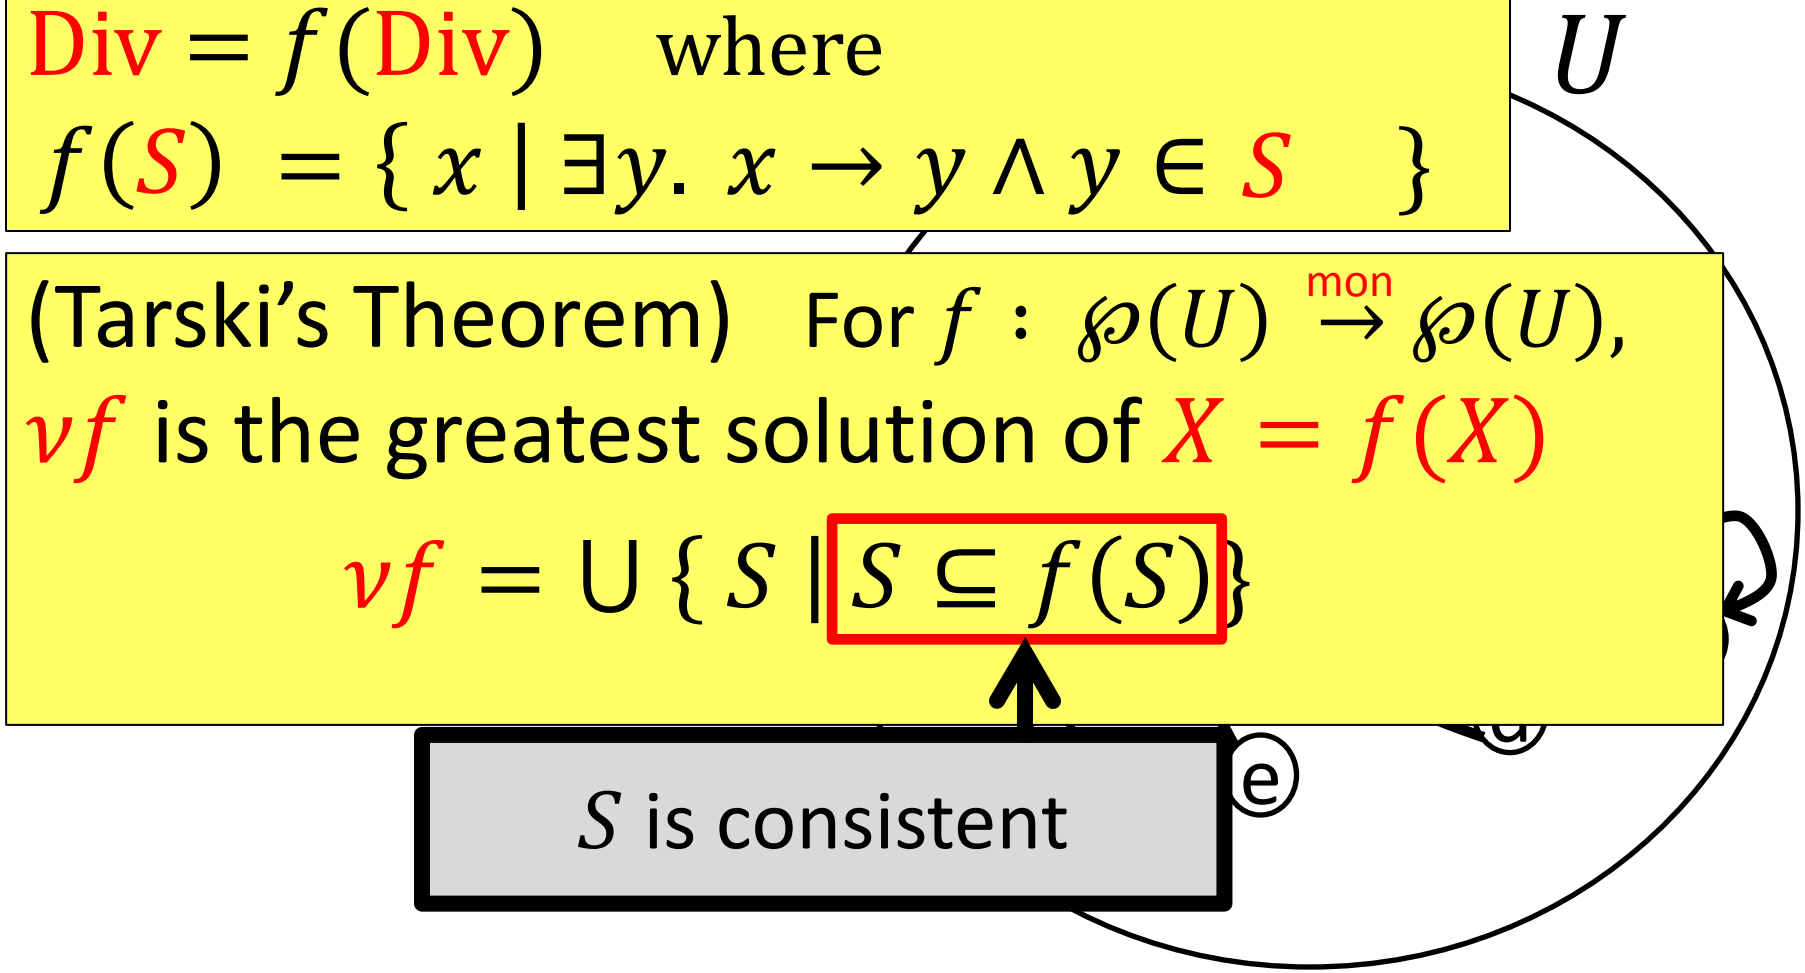
$\mathrm{Div} = f(\mathrm{Div})$ where

$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$

(Tarski's Theorem) For $f : \wp(U) \overset{\text{mon}}{\to} \wp(U)$,

νf is the greatest solution of $X = f(X)$

$$\nu f = \bigcup \{\, S \mid S \subseteq f(S) \,\}$$

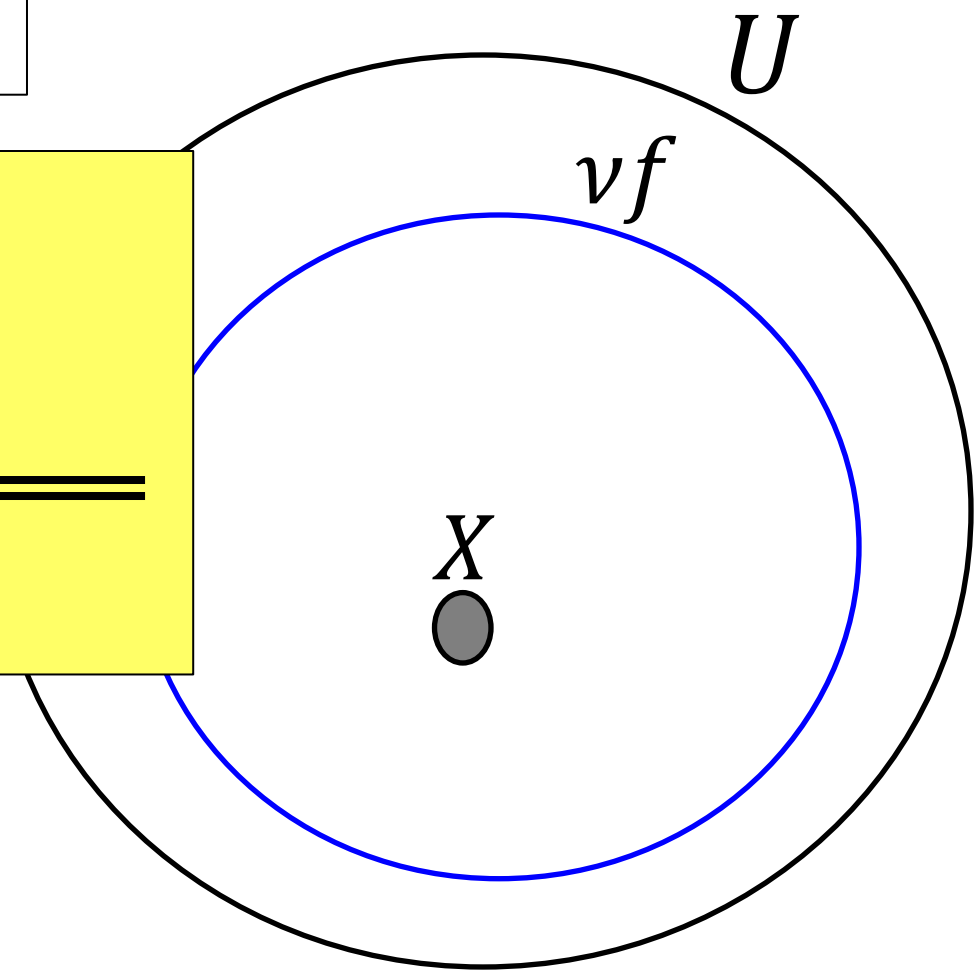


Tarski's Principle

$$f : \wp(U) \overset{\text{mon}}{\to} \wp(U)$$

(Tarski's Principle)

$$X \subseteq \nu f$$



Tarski's Principle

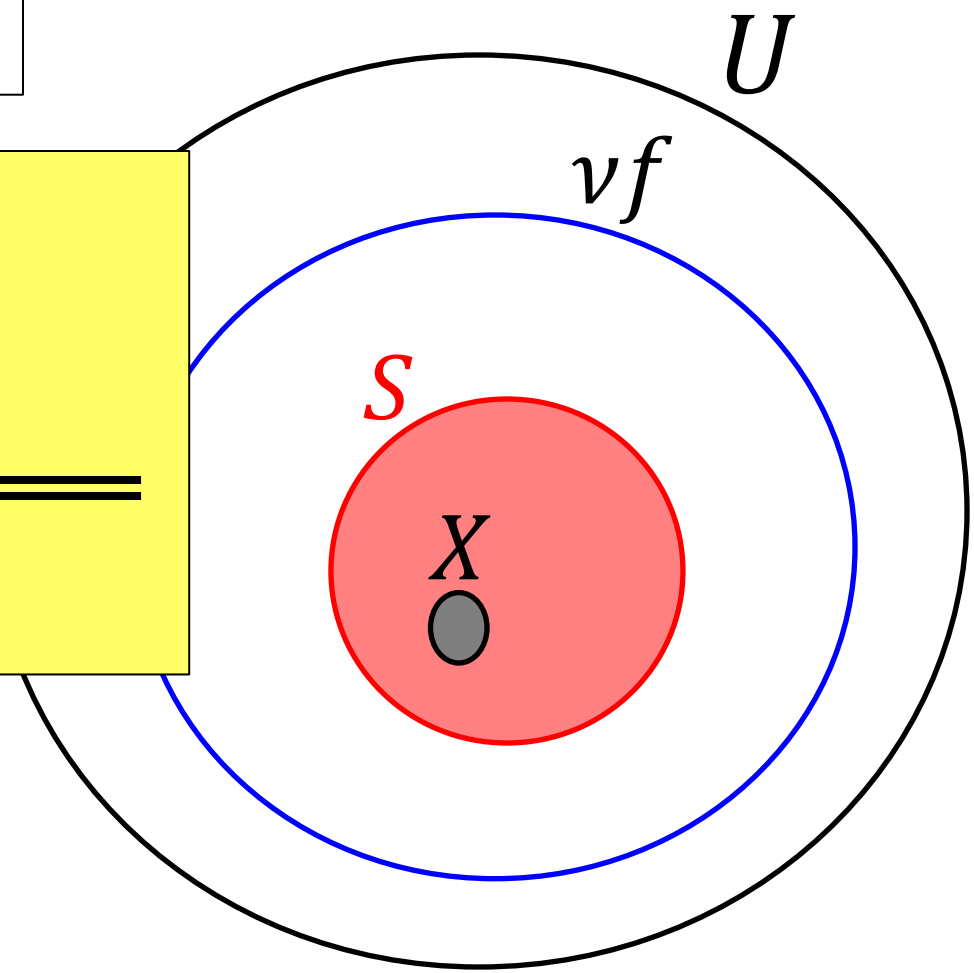
$$f : \wp(U) \xrightarrow{\text{mon}} \wp(U)$$

(Tarski's Principle)

$$\exists S.\ X \subseteq S$$

$$\overline{\qquad\qquad\qquad\qquad\qquad\qquad}$$

$$X \subseteq \nu f$$



Tarski's Principle

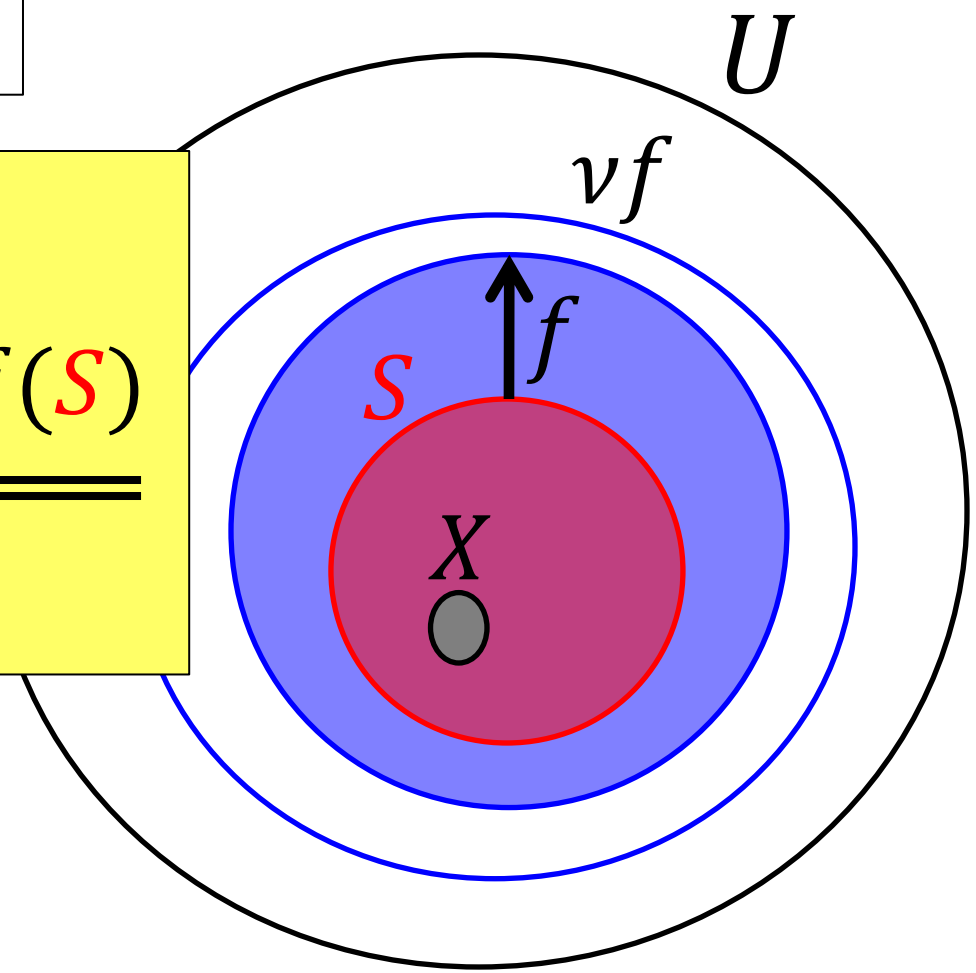
$$f : \wp(U) \xrightarrow{\text{mon}} \wp(U)$$

(Tarski's Principle)

$$\exists S.\ X \subseteq S \ \wedge\ S \subseteq f(S)$$

$$\overline{\qquad\qquad\qquad\qquad\qquad\qquad}$$

$$X \subseteq \nu f$$

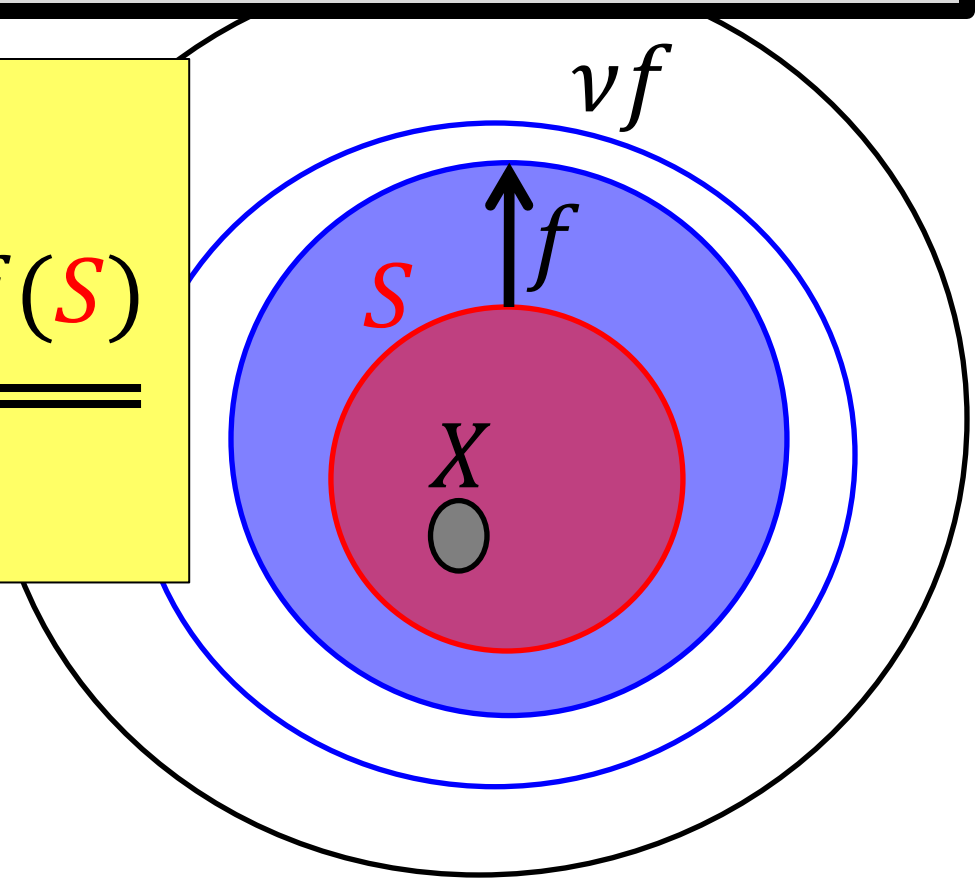


Tarski's Principle

Sound by Definition: $\nu f = \bigcup \{ S \mid S \subseteq f(S) \}$

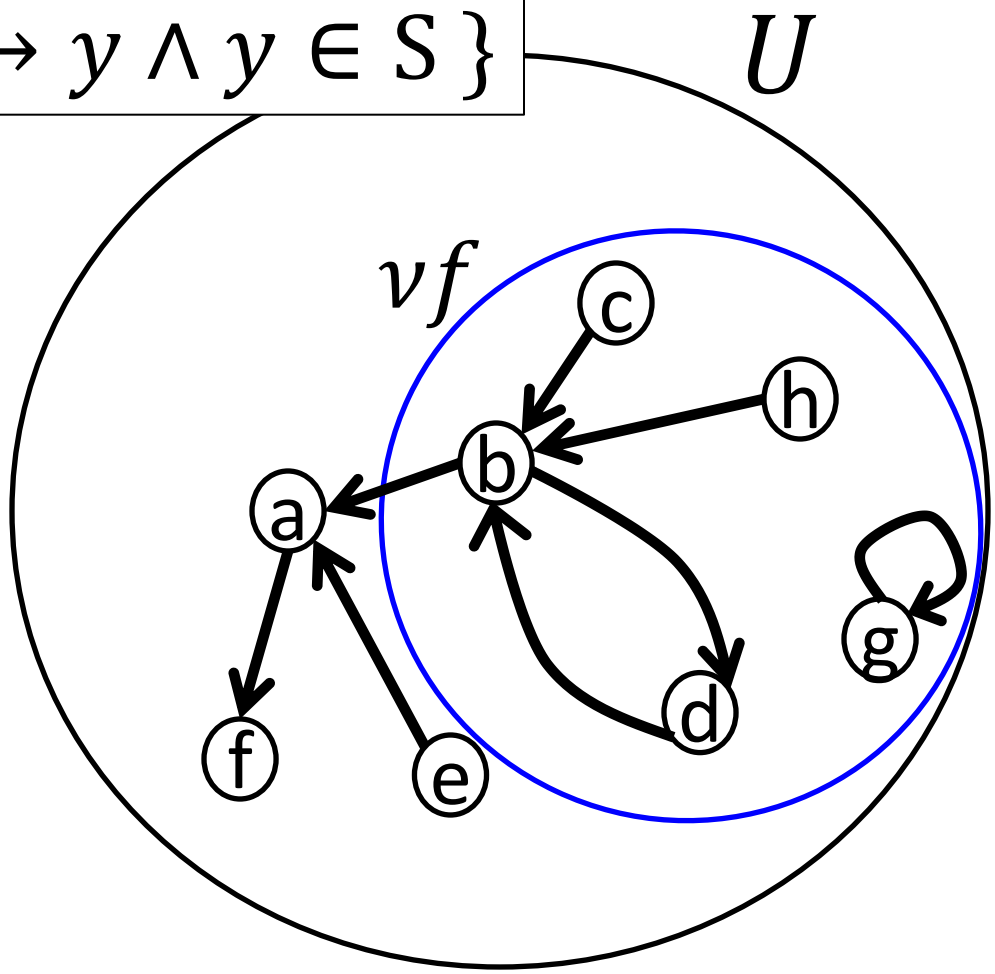
(Tarski's Principle)

$$\frac{\exists S.\ X \subseteq S \ \wedge\ S \subseteq f(S)}{X \subseteq \nu f}$$



Tarski Principle: Example

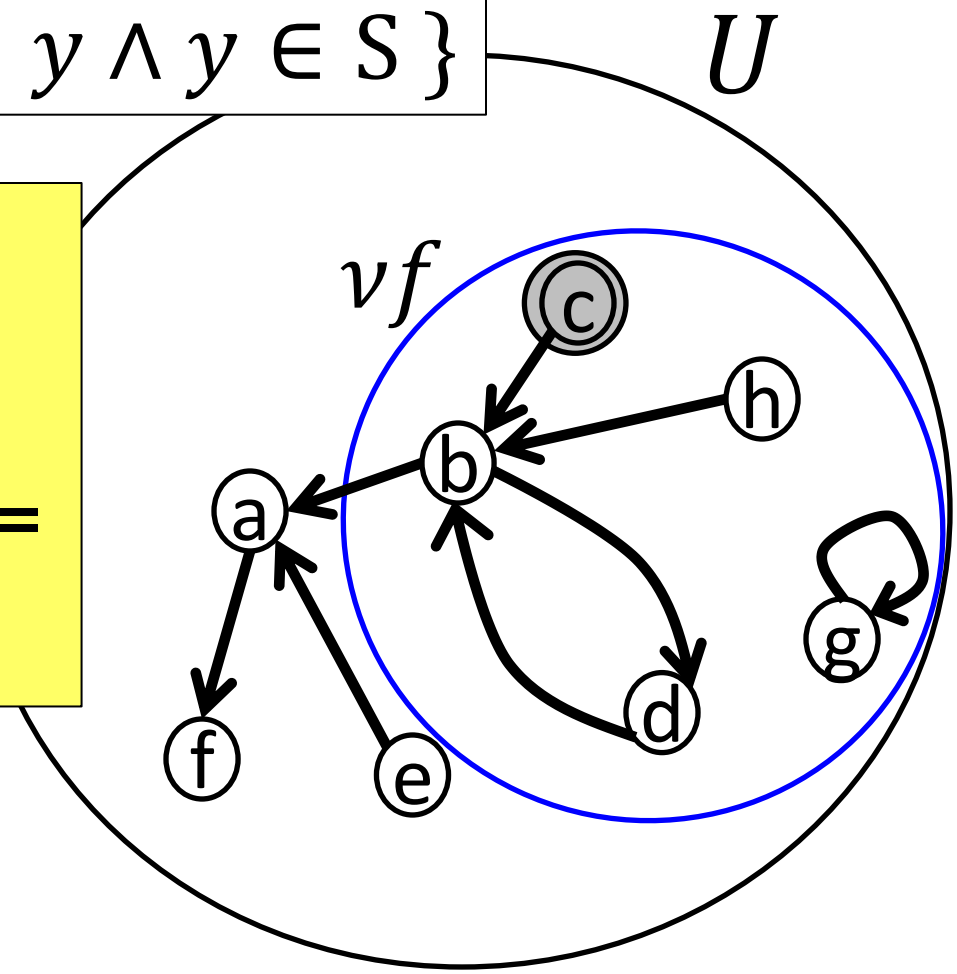
$$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$$



Tarski Principle: Example

$$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$$

$$\{c\} \subseteq \nu f$$

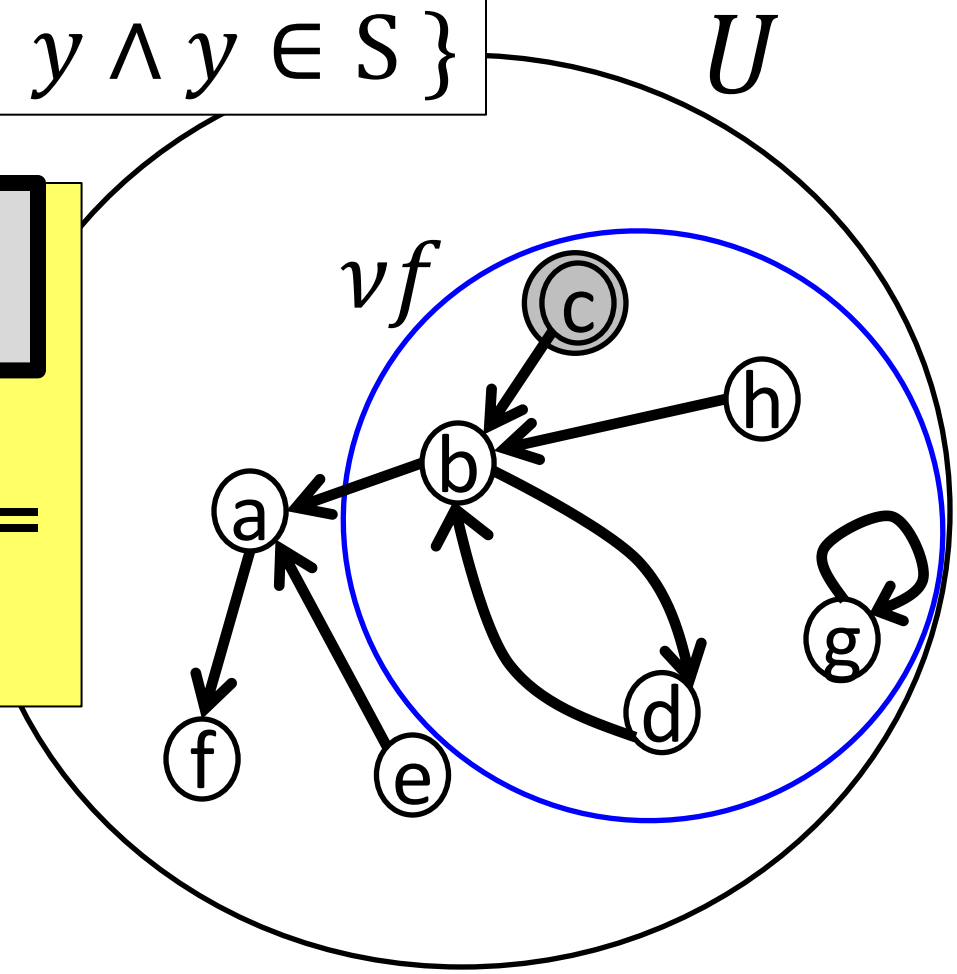


Tarski Principle: Example

$$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$$

$$\{c\} \not\subseteq f(\{c\}) = \emptyset$$

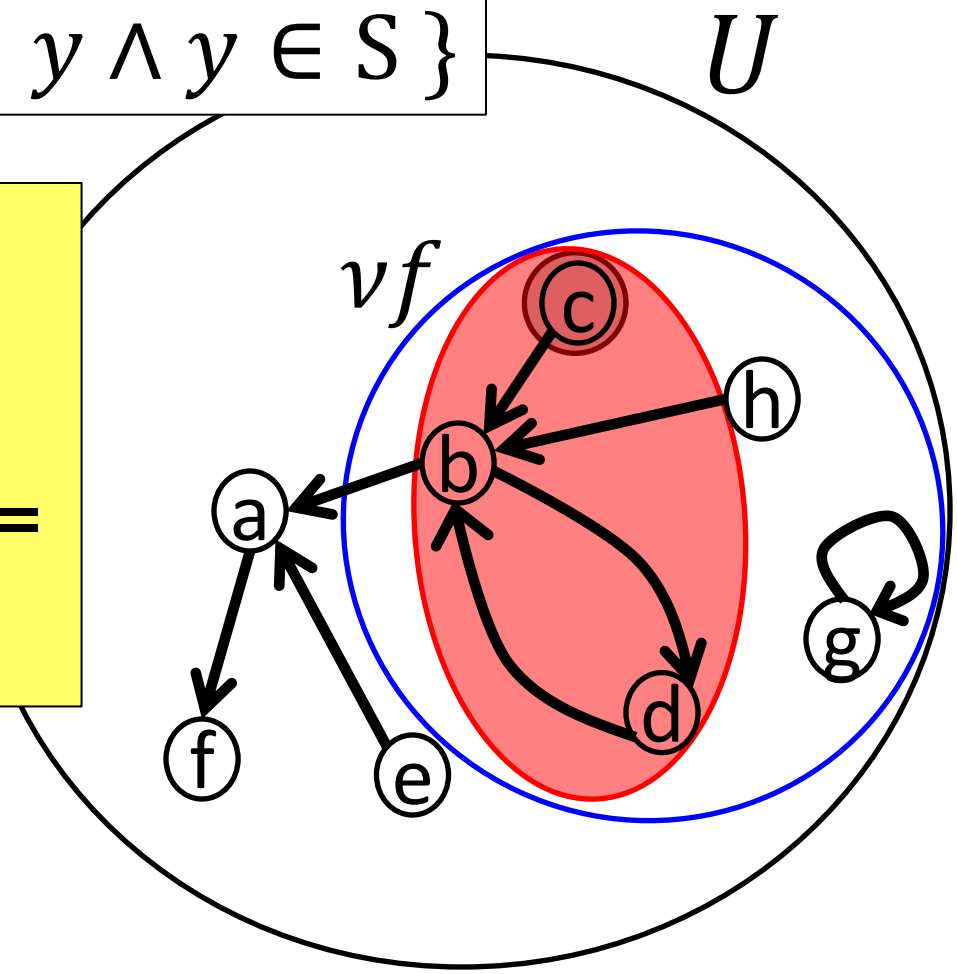
$$\{c\} \subseteq \nu f$$



Tarski Principle: Example

$$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$$

$$\frac{\{c\} \subseteq \{c, b, d\}}{\{c\} \subseteq \nu f}$$



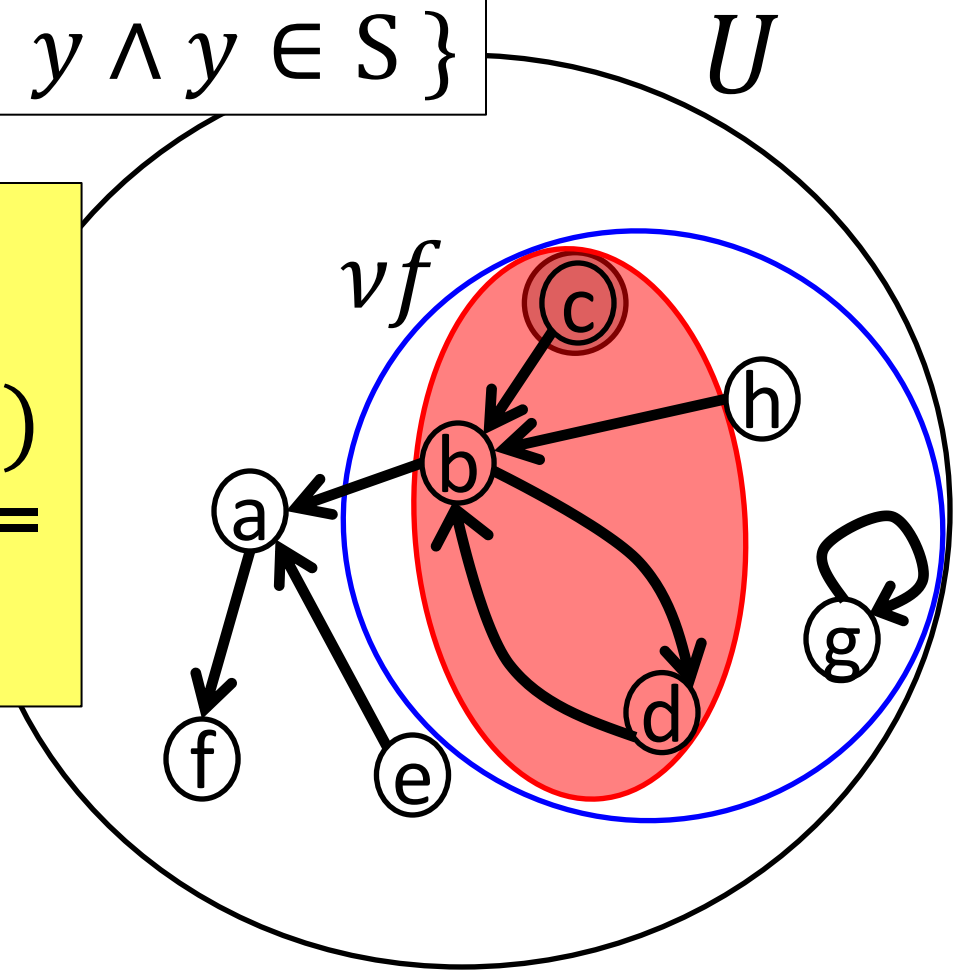
Tarski Principle: Example

$$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$$

$$\{c\} \subseteq \{c, b, d\}$$

$$\{c, b, d\} \subseteq f(\{c, b, d\})$$

$$\{c\} \subseteq \nu f$$



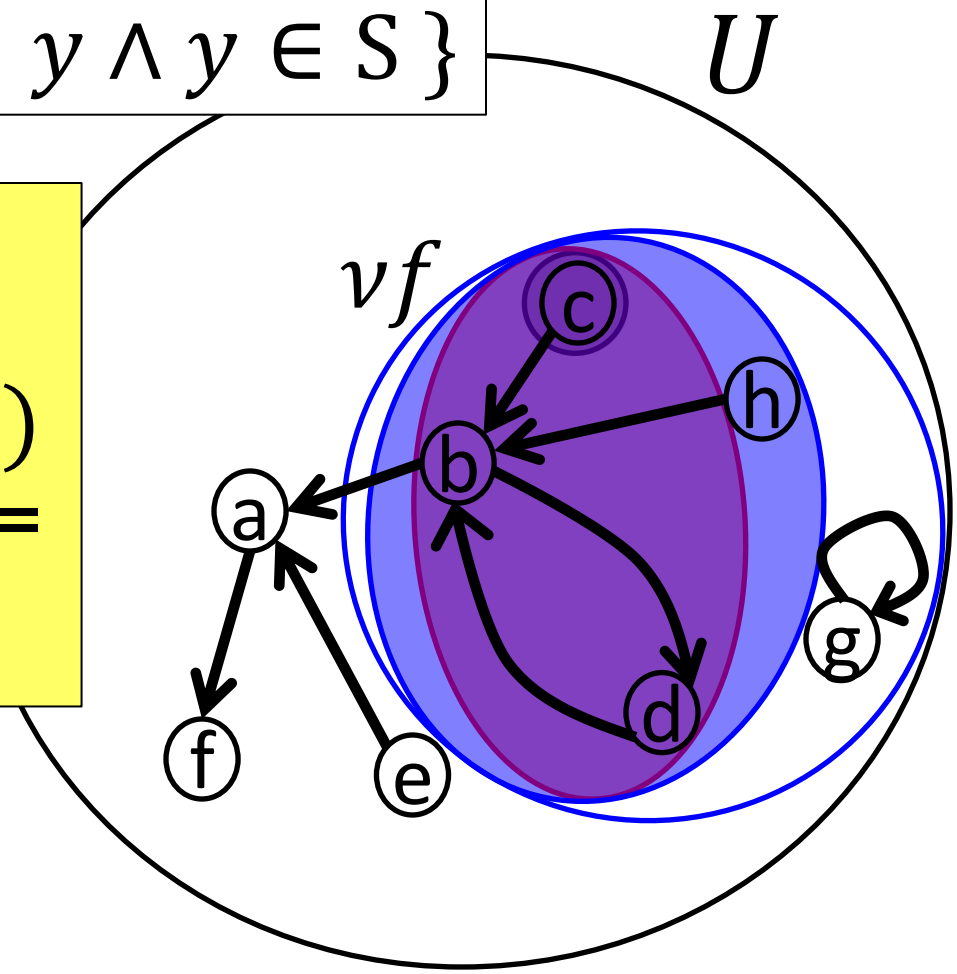
Tarski Principle: Example

$$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$$

$$\{c\} \subseteq \{c, b, d\}$$

$$\{c, b, d\} \subseteq f(\{c, b, d\})$$

$$\{c\} \subseteq \nu f$$



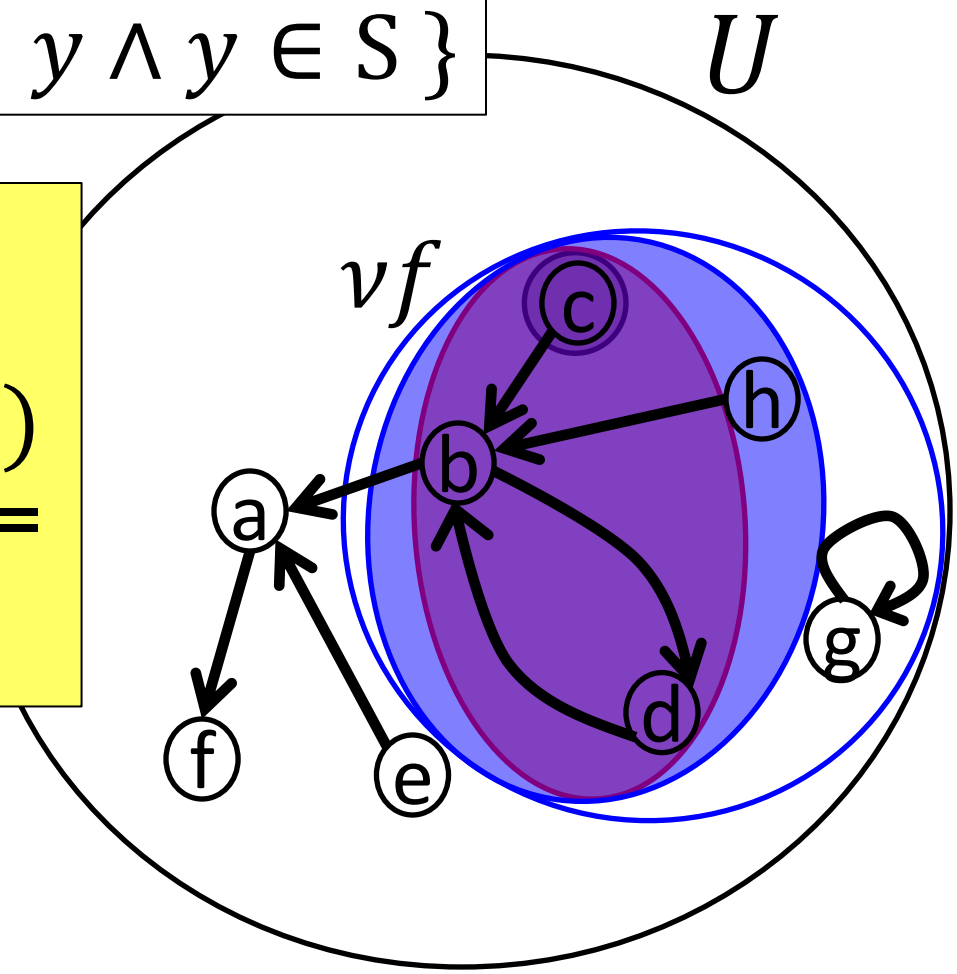
Tarski Principle: Example

$$f(S) = \{\, x \mid \exists y.\ x \to y \wedge y \in S \,\}$$

$$\{c\} \subseteq \{c, b, d\}$$

$$\{c, b, d\} \subseteq f(\{c, b, d\})$$

$$\{c\} \subseteq \nu f$$



Tarski's Principle

+ Simple & Easy to Understand

- Have to Find a Consistent Set Up Front

$$\{c\} \subseteq \{c, b, d\}$$

$$\{c, b, d\} \subseteq f(\{c, b, d\})$$

$$\{c\} \subseteq \nu f$$

Syntactically Guarded Coinduction

$$f : \wp(U) \overset{\text{mon}}{\to} \wp(U)$$

(Guarded Coinduction)

$$\frac{}{X \subseteq \nu f}$$

Syntactically Guarded Coinduction

$$f : \wp(U) \overset{\text{mon}}{\to} \wp(U)$$

(Guarded Coinduction)

$$\frac{X \subseteq \nu f \implies X \subseteq \nu f}{X \subseteq \nu f}$$

Syntactically Guarded Coinduction

$$f : \wp(U) \overset{\text{mon}}{\to} \wp(U)$$

(Guarded Coinduction)

$$\frac{\text{pf: } X \subseteq \nu f \implies X \subseteq \nu f}{X \subseteq \nu f}$$

(pf is guarded)

Syntactically Guarded Coinduction

f

- Guardedness rules out trivial proofs.

(Gu

pf: $\dfrac{X \subseteq \nu f \implies X \subseteq \nu f}{X \subseteq \nu f}$ (pf is guarded)

Syntactically Guarded Coinduction

f

- Guardedness rules out trivial proofs.
- Its definition is syntactic and complex.

(Gu

pf: $X \subseteq \nu f \implies X \subseteq \nu f$

$$\frac{X \subseteq \nu f \implies X \subseteq \nu f}{X \subseteq \nu f}$$

(pf is guarded)

Syntactically Guarded Coinduction

f

- Guardedness rules out trivial proofs.
- Its definition is syntactic and complex.
- The assumption can be used only after making progress.

(Gu

pf: $X \subseteq \nu f \implies X \subseteq \nu f$

$$\frac{\text{pf: } X \subseteq \nu f \implies X \subseteq \nu f}{X \subseteq \nu f}$$

(pf is guarded)

Syn duction

What cofix does in Coq

f ofs.

- Its definition is syntactic and complex.
- The assumption can be used only after making progress.

(Gu

pf: $\dfrac{X \subseteq \nu f \implies X \subseteq \nu f}{X \subseteq \nu f}$ (pf is guarded)

Syn duction

Permits Incremental Reasoning

f ofs.

- Its definition is syntactic and complex.
- The assumption can be used only after making progress.

(Gu

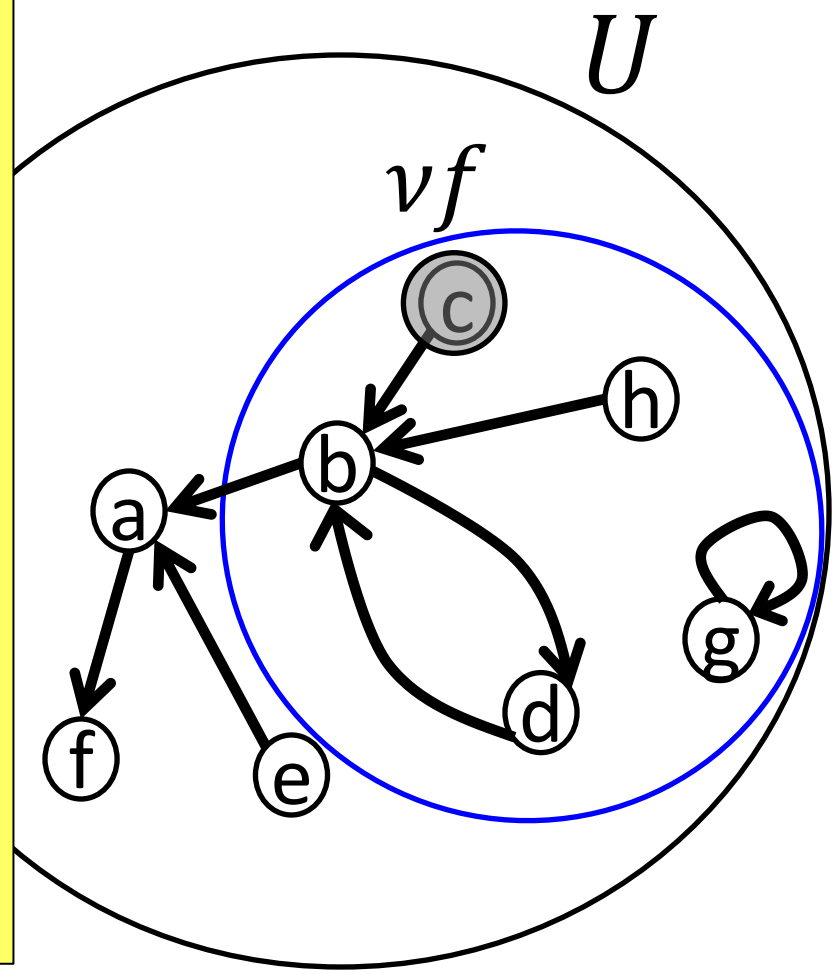
pf: $X \subseteq \nu f \implies X \subseteq \nu f$

$$\frac{X \subseteq \nu f \implies X \subseteq \nu f}{X \subseteq \nu f}$$

(pf is guarded)

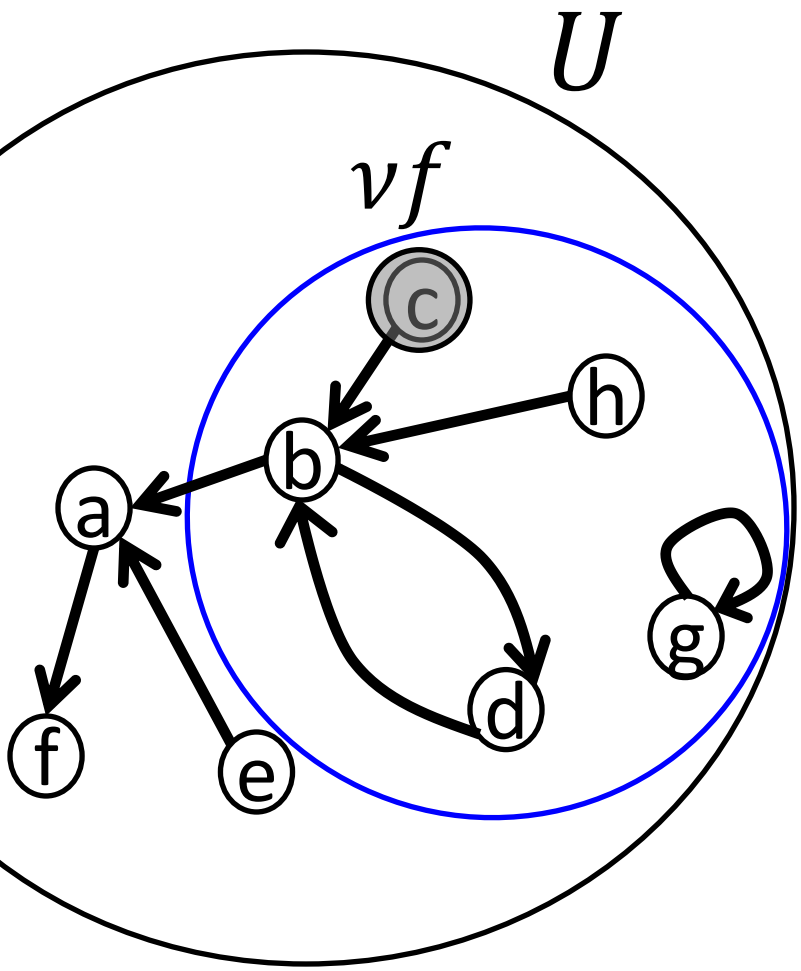
Example: Guarded Coinduction

$\{c\} \subseteq \nu f$



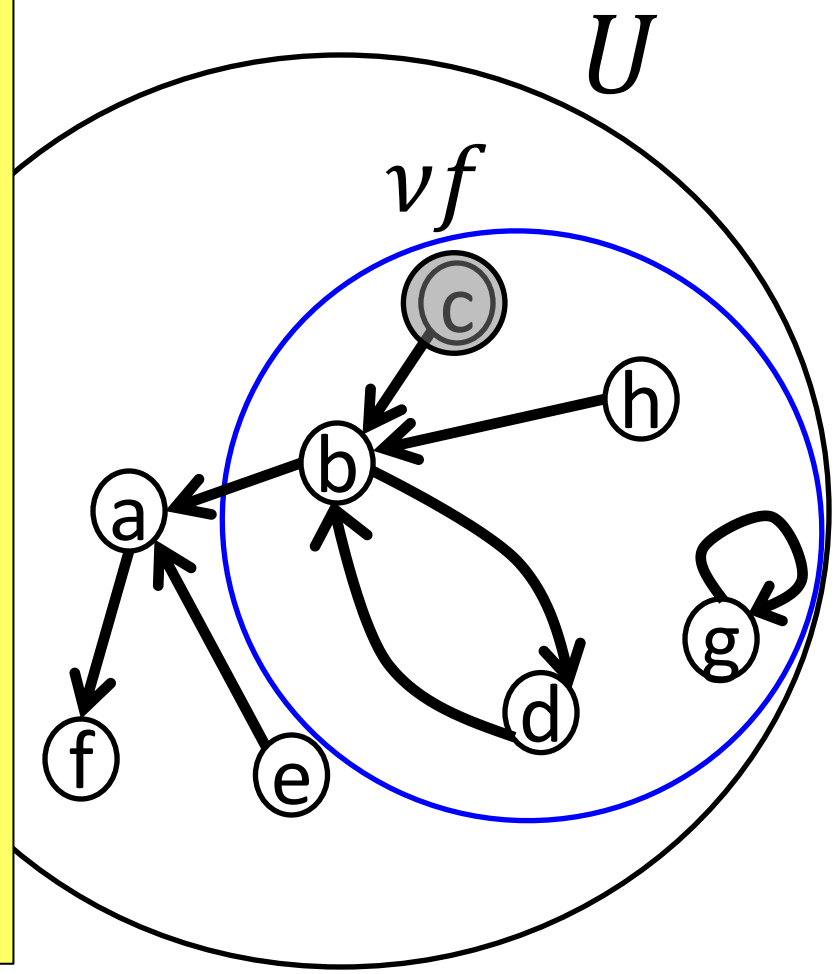
Example: Guarded Coinduction

$$\frac{\{c\} \subseteq f(\nu f)}{\{c\} \subseteq \nu f}$$



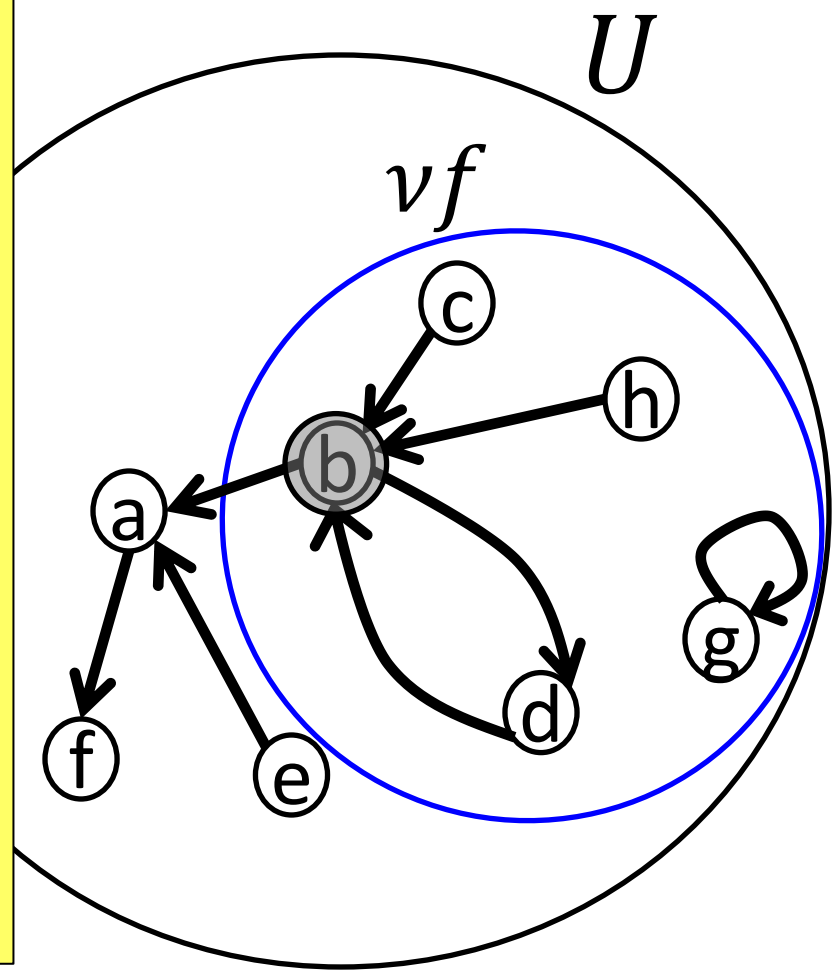
Example: Guarded Coinduction

$$\frac{\exists y.\ \mathrm{c} \to y \wedge y \in \nu f}{\{\mathrm{c}\} \subseteq \nu f}$$



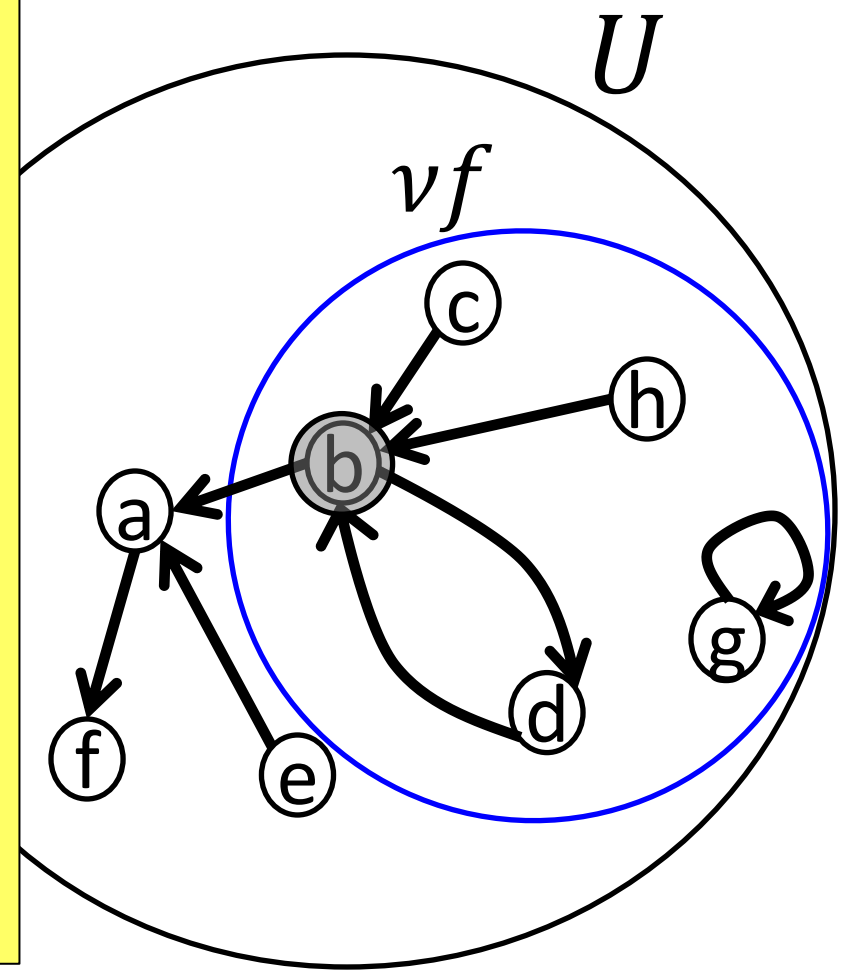
Example: Guarded Coinduction

$$\frac{\exists y.\ \mathrm{c} \to y \wedge y \in \nu f}{\{\mathrm{c}\} \subseteq \nu f}$$



Example: Guarded Coinduction

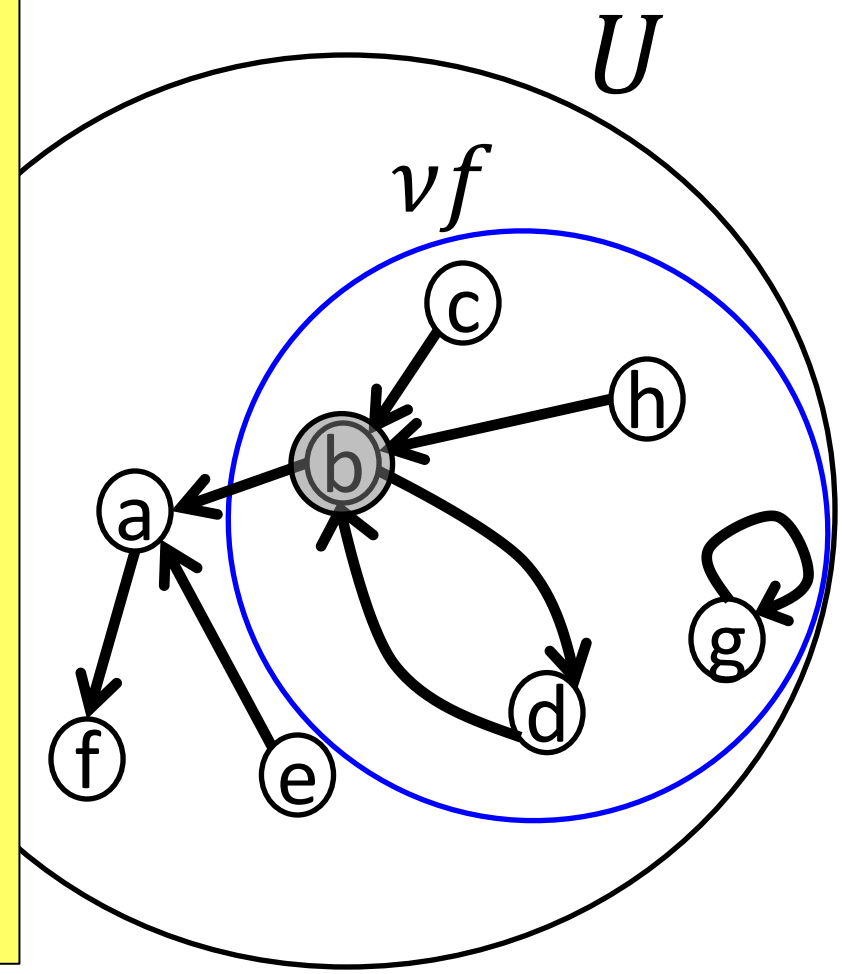
$$\frac{b \in \nu f}{\{c\} \subseteq \nu f}$$



Example: Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{b \in \nu f}{\{c\} \subseteq \nu f}$$



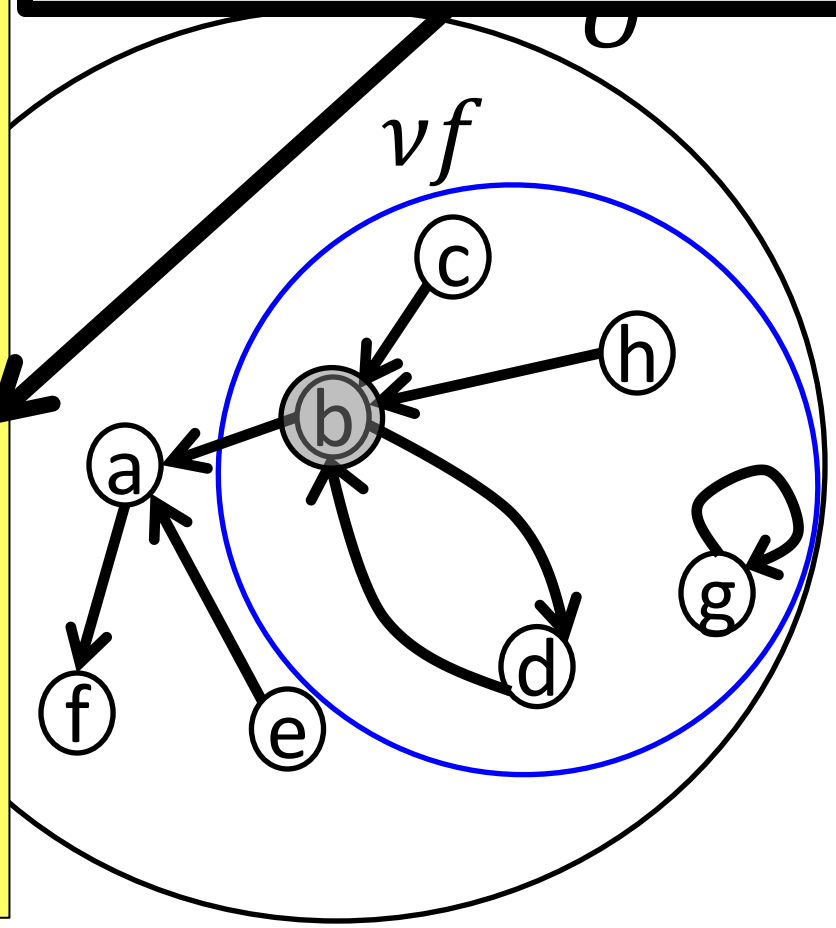
Example: Guarde

By
Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{b \in \nu f}{\{c\} \subseteq \nu f}$$



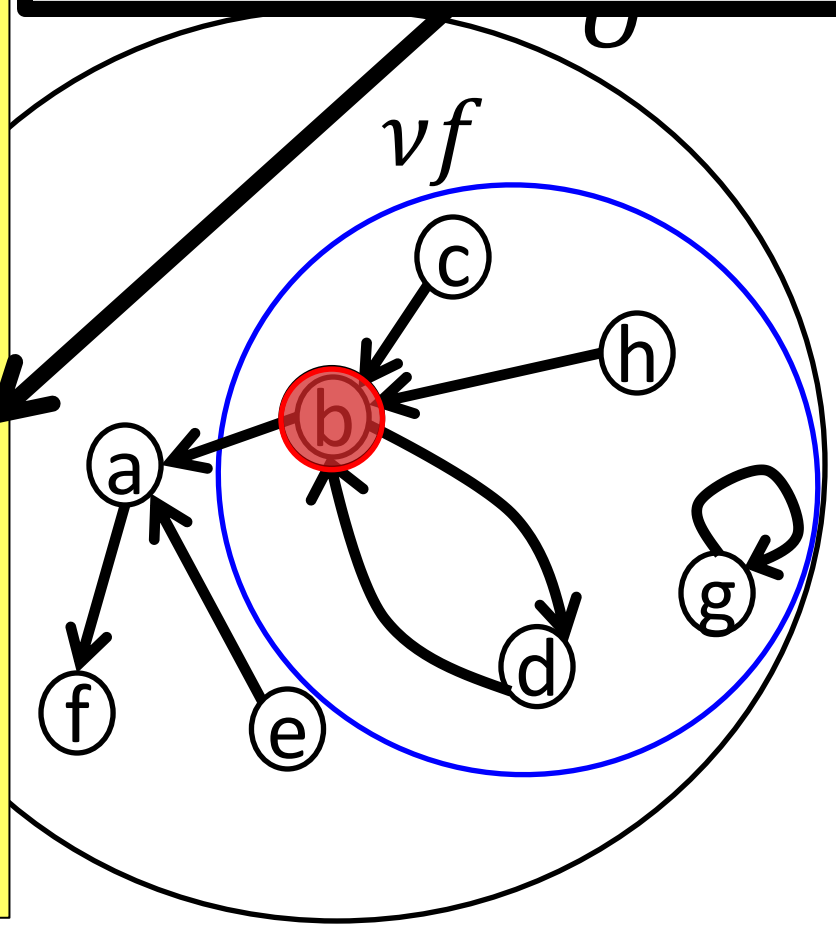
Example: Guarde

By
Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{b \in \nu f}{\{c\} \subseteq \nu f}$$



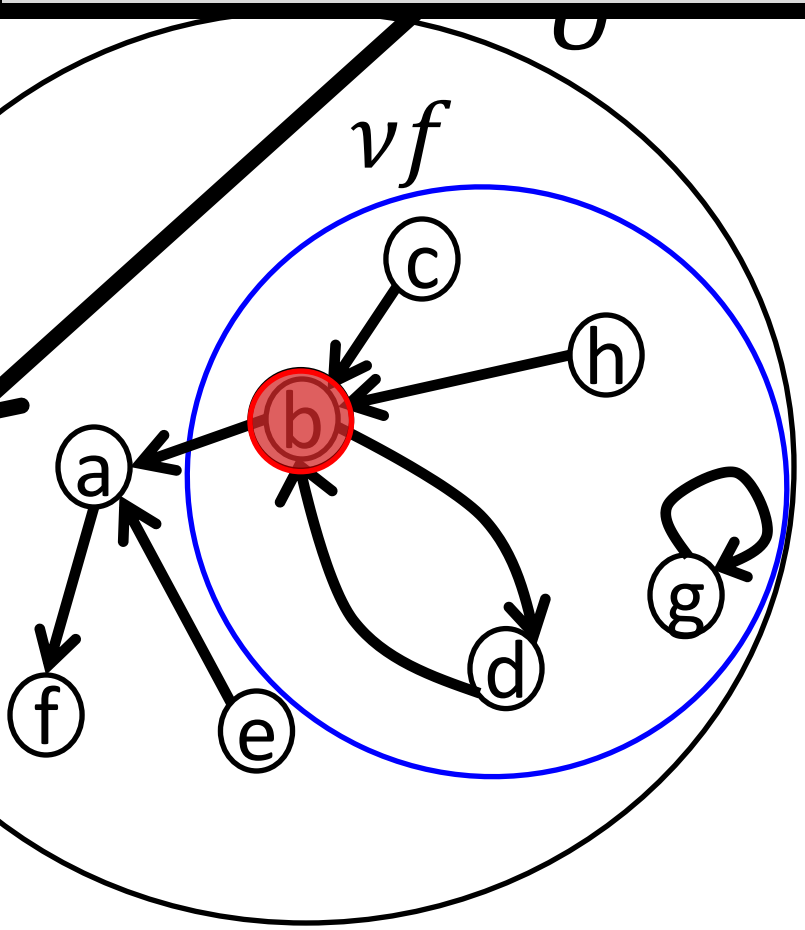
Trivial Proof is NOT Guarded

By Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{b \in \nu f}{\{c\} \subseteq \nu f}$$



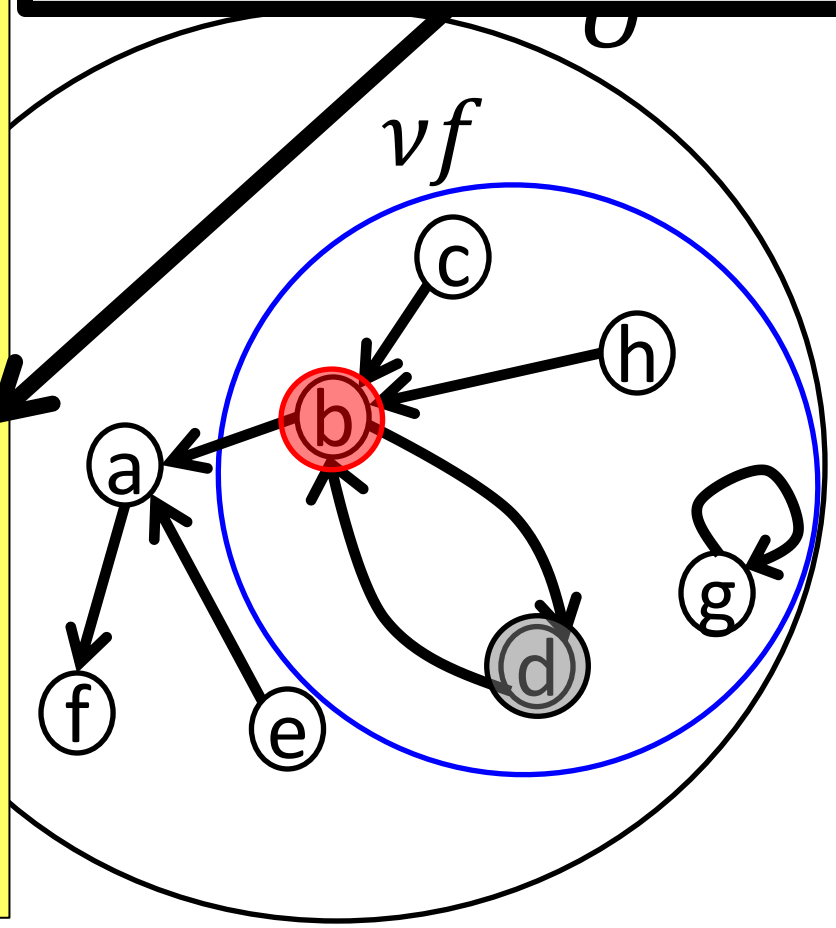
Example: Guarde

By
Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{b \in \nu f}{\{c\} \subseteq \nu f}$$



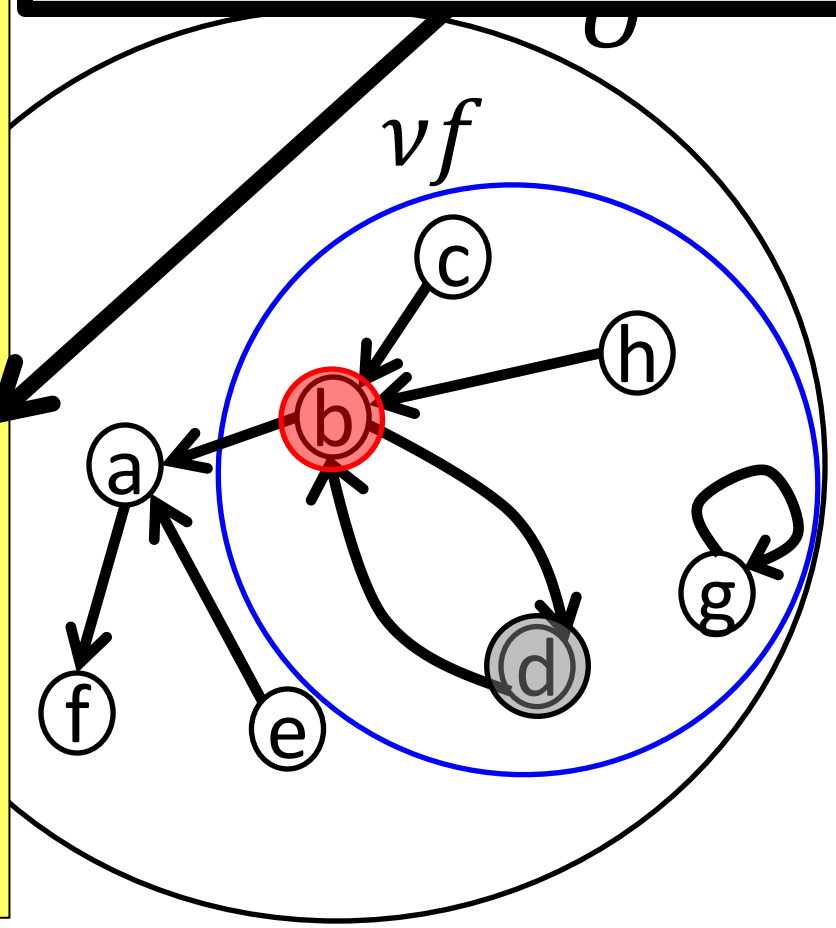
Example: Guarde

By
Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{d\} \subseteq \nu f}{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{}{\{c\} \subseteq \nu f}$$



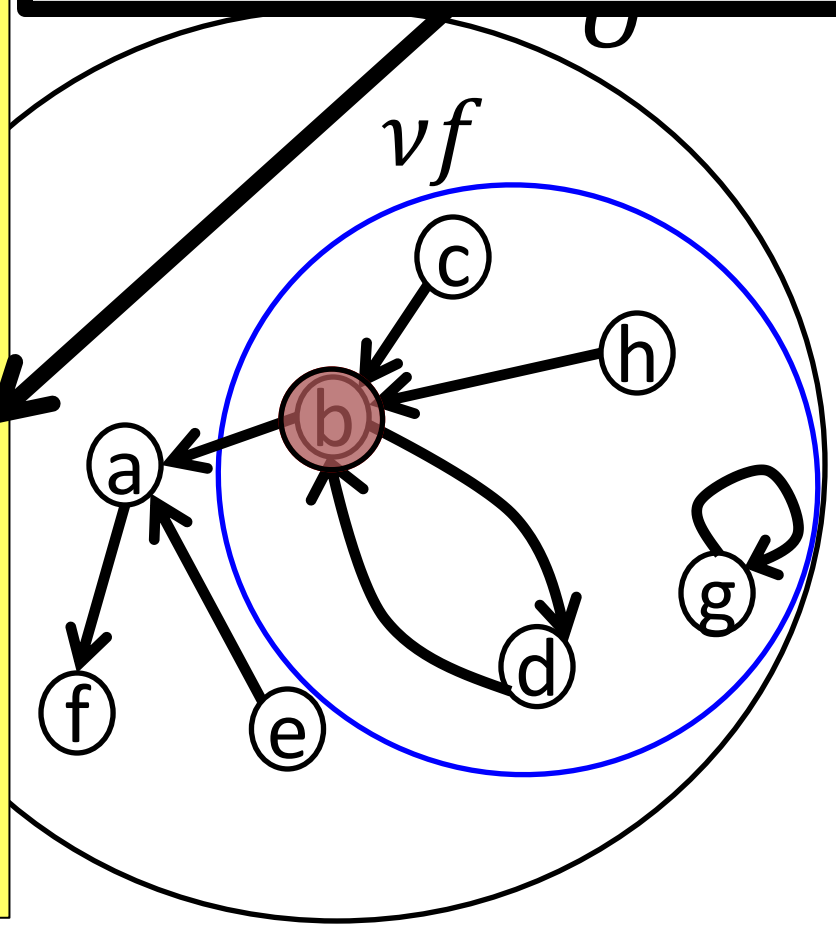
Example: Guarde

By
Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{d\} \subseteq \nu f}{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{}{\{c\} \subseteq \nu f}$$



Example: Guarde

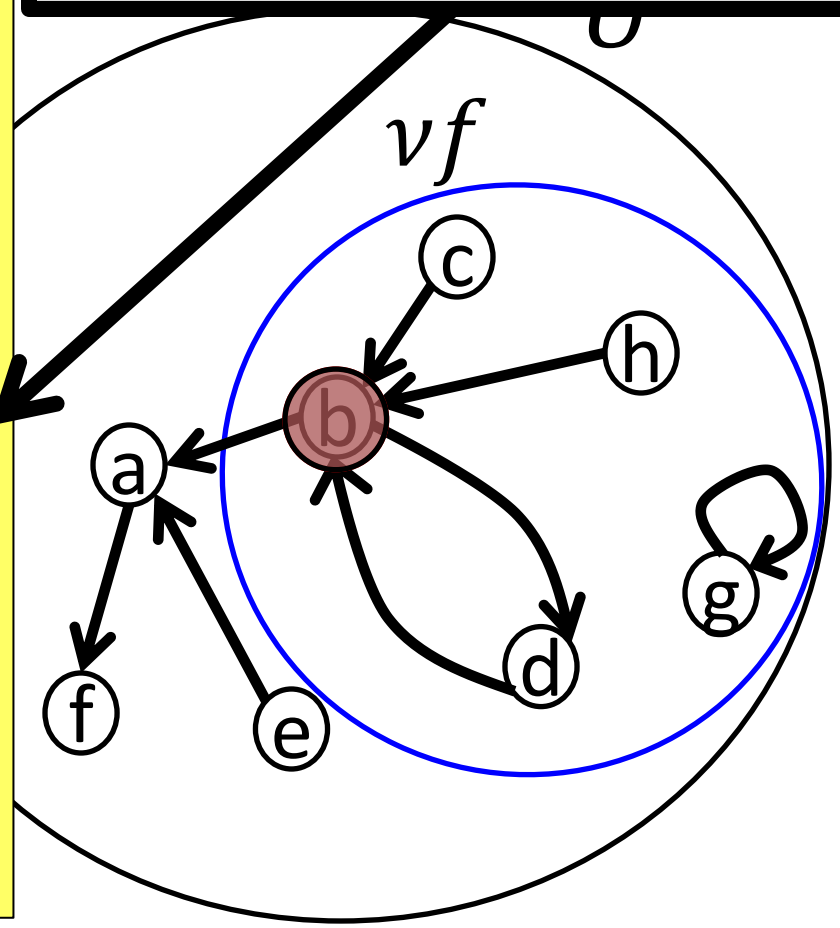
By
Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f \Rightarrow \{d\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{}{\{c\} \subseteq \nu f}$$



This Proof is Guarded

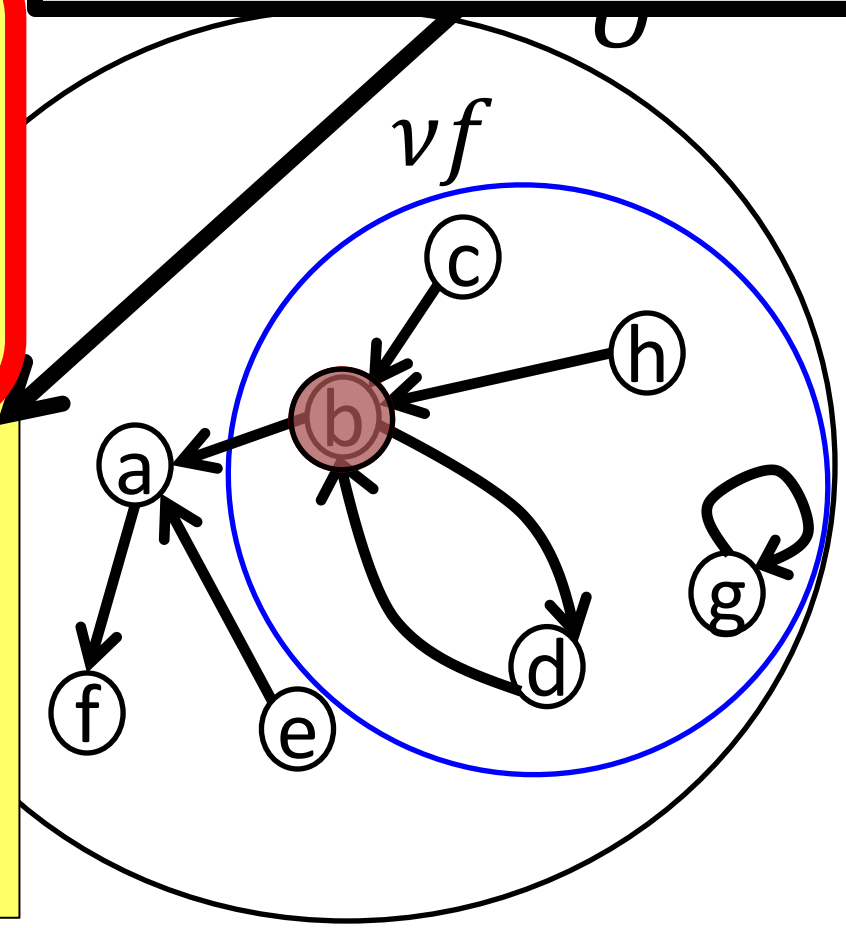
By Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f \Rightarrow \{d\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{b \in \nu f}{\{c\} \subseteq \nu f}$$



This Proof is Guarded

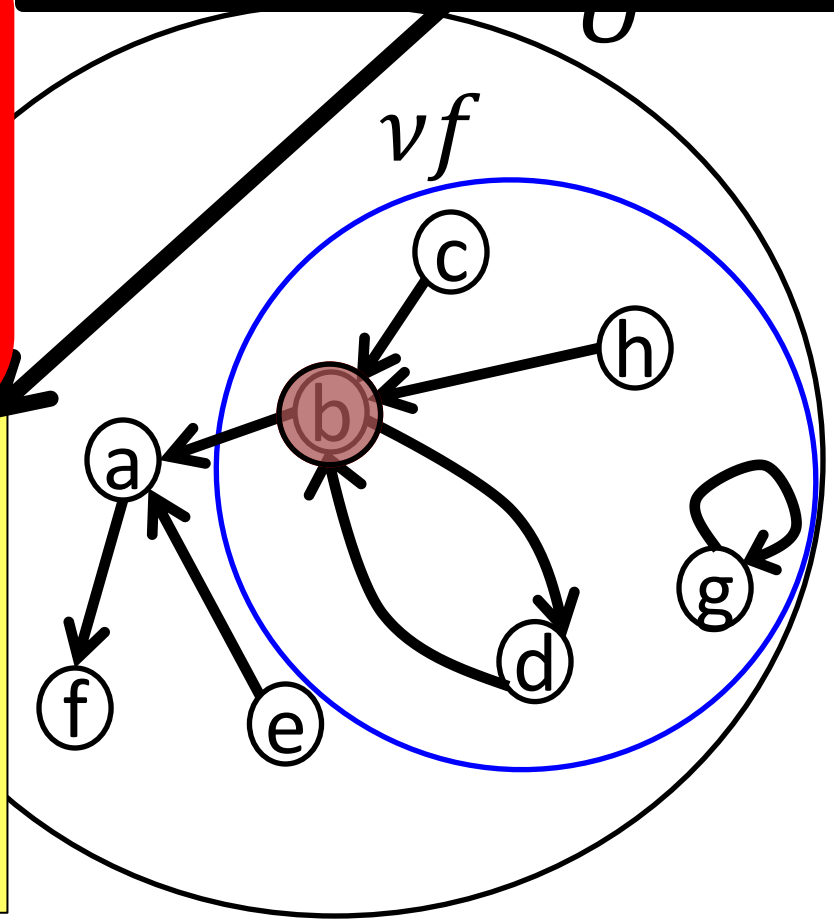
By Guarded Coinduction

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f \Rightarrow \{d\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f}{\{b\} \subseteq \nu f}$$

$$\frac{\{b\} \subseteq \nu f}{b \in \nu f}$$

$$\frac{b \in \nu f}{\{c\} \subseteq \nu f}$$



This Proof is
Guarded

By
Guarded Coinduction

$\{b\} \subseteq \nu f \Rightarrow \{b\} \subseteq \nu f$

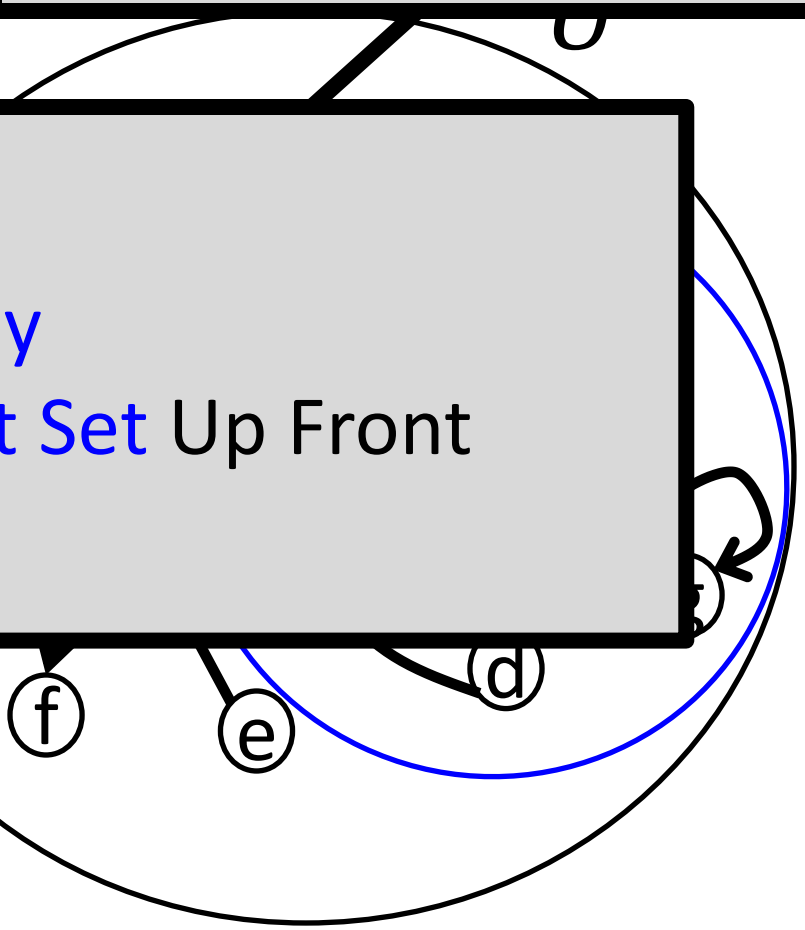
$\{b\} \subseteq$

$\{b\} \subseteq$

$b \in \nu f$

$\{c\} \subseteq \nu f$

Prove Incrementally
with NO Consistent Set Up Front



Example: Simulation between Programs

$$\text{restart } h\ n := \text{if } n > \underline{0} \text{ then } (\text{output } n; \text{restart } h\ (n - \underline{1})) \text{ else } h\ \underline{0}$$

$$\begin{aligned} \text{f } n \ :=\ & \text{output } (\underline{2} * n); \\ & \text{let } v = \text{input}() \text{ in} \\ & \text{if } v = \underline{0} \text{ then restart f } (\underline{2} * n) \text{ else f } (v + n) \end{aligned}$$

$$\begin{aligned} \text{g } n := \ & \text{let } v = (\text{output } n; \text{input}()) * \underline{2} \text{ in} \\ & (\text{if } v \neq \underline{0} \text{ then g else restart g})\ (v + n) \end{aligned}$$

Example: Simulation between Programs

$$\text{restart}\ h\ n := \text{if}\ n > \underline{0}\ \text{then}\ (\text{output}\ n; \text{restart}\ h\ (n - \underline{1}))\ \text{else}\ h\ \underline{0}$$

$$\begin{aligned} \text{f}\ n\ &:= \text{output}\ (\underline{2} * n); \\ &\quad \text{let}\ v = \text{input}() \ \text{in} \\ &\quad \text{if}\ v = \underline{0}\ \text{then}\ \text{restart}\ \text{f}\ (\underline{2} * n)\ \text{else}\ \text{f}\ (v + n) \end{aligned}$$

$$\begin{aligned} \text{g}\ n &:= \text{let}\ v = (\text{output}\ n; \text{input}()) * \underline{2}\ \text{in} \\ &\quad (\text{if}\ v \neq \underline{0}\ \text{then}\ \text{g}\ \text{else}\ \text{restart}\ \text{g})\ (v + n) \end{aligned}$$

Summary:
Pros and Cons of Two Principles

- Tarski's Fixed Point Theorem
  - + Simple & Robust
  - - Inconvenient to use

- Syntactically Guarded Coinduction
  - - Complex & Fragile due to "Guardedness Checking"
  - + More Convenient to use

Talk Outline

- Previous Approaches
  - Tarski's Fixed Point Theorem
  - Syntactically Guarded Coinduction
- Our Approach
  - Parameterized Coinduction

Syntactically Guarded Coinduction

$$f : \wp(U) \overset{\text{mon}}{\to} \wp(U)$$

Syntactically Guarded Coinduction

$$\text{pf: } \frac{X \subseteq \nu f \implies X \subseteq \nu f}{X \subseteq \nu f}$$

(pf is guarded)

Semantically Guarded Coinduction

Guardedness Expressed Directly Within the Logic

Semantically Guarded Coinduction

$$\frac{X \subseteq \nu f \overset{\mathrm{G}}{\Longrightarrow} X \subseteq \nu f}{X \subseteq \nu f}$$

Guarded Implication

$$Y \subseteq \nu f \overset{\mathrm{G}}{\Longrightarrow} X \subseteq \nu f$$

Guarded Implication

Do NOT want to EXTEND the logic

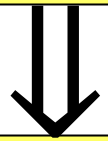
$$Y \subseteq \nu f \overset{G}{\Longrightarrow} X \subseteq \nu f$$

Guarded Implication

Instead, Define G_f

Called "Parameterized Greatest Fixed Point" of f

$$Y \subseteq \nu f \overset{\mathrm{G}}{\Longrightarrow} X \subseteq \nu f$$

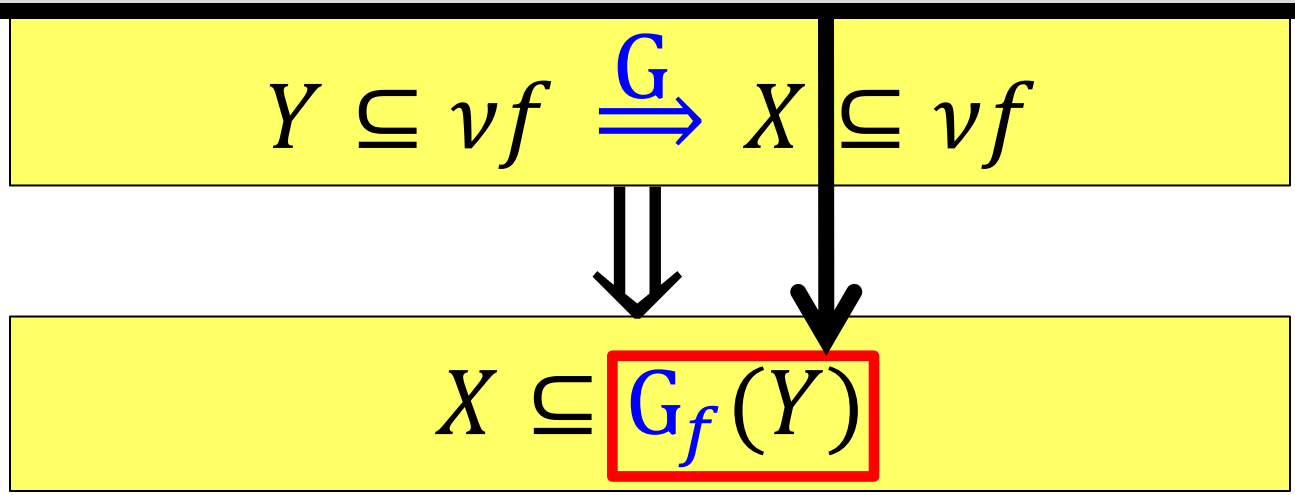


$$X \subseteq \mathrm{G}_f(Y)$$

Guarded Implication

Greatest Fixed Point of f

Under Guarded Assumption of $Y \subseteq \nu f$



Guarded Implication

Greatest Fixed Point of f

Under Guarded Assumption of $Y \subseteq \nu f$

$$Y \subseteq \nu f \overset{\mathrm{G}}{\Longrightarrow} X \subseteq \nu f$$

$$X \subseteq \mathrm{G}_f(Y)$$

$$\mathrm{G}_f(Y) \overset{\text{def}}{=} \nu(\lambda S.\, f(Y \cup S))$$

Properties of G_f

(Init) $\mathrm{G}_f(\emptyset) = \nu f$

(Unfolding) $\mathrm{G}_f(Y) = f(Y \cup \mathrm{G}_f(Y))$

(Semantically Guarded Coinduction)

$$X \subseteq \mathrm{G}_f(Y) \iff X \subseteq \mathrm{G}_f(X \cup Y)$$

Properties of G_f

(Init) $\mathrm{G}_f(\emptyset) = \nu f$

(Unfolding) $\mathrm{G}_f(Y) = f(Y \cup \mathrm{G}_f(Y))$

(Semantically Guarded Coinduction)

$$X \subseteq \mathrm{G}_f(Y) \iff X \subseteq \mathrm{G}_f(X \cup Y)$$

Properties of G_f

(Init) $\mathrm{G}_f(\emptyset) = \nu f$

(Unfolding) $\mathrm{G}_f(Y) = f(Y \cup \mathrm{G}_f(Y))$

(Semantically Guarded Coinduction)

$$X \subseteq \mathrm{G}_f(Y) \iff X \subseteq \mathrm{G}_f(X \cup Y)$$

Properties of G_f

(Init) $\mathrm{G}_f(\emptyset) = \nu f$

(Unfolding) $\mathrm{G}_f(Y) = f(Y \cup \mathrm{G}_f(Y))$

(Semantically Guarded Coinduction)

$$X \subseteq \mathrm{G}_f(Y) \iff X \subseteq \mathrm{G}_f(X \cup Y)$$

Properties of G_f

(Init) $\mathrm{G}_f(\emptyset) = \nu f$

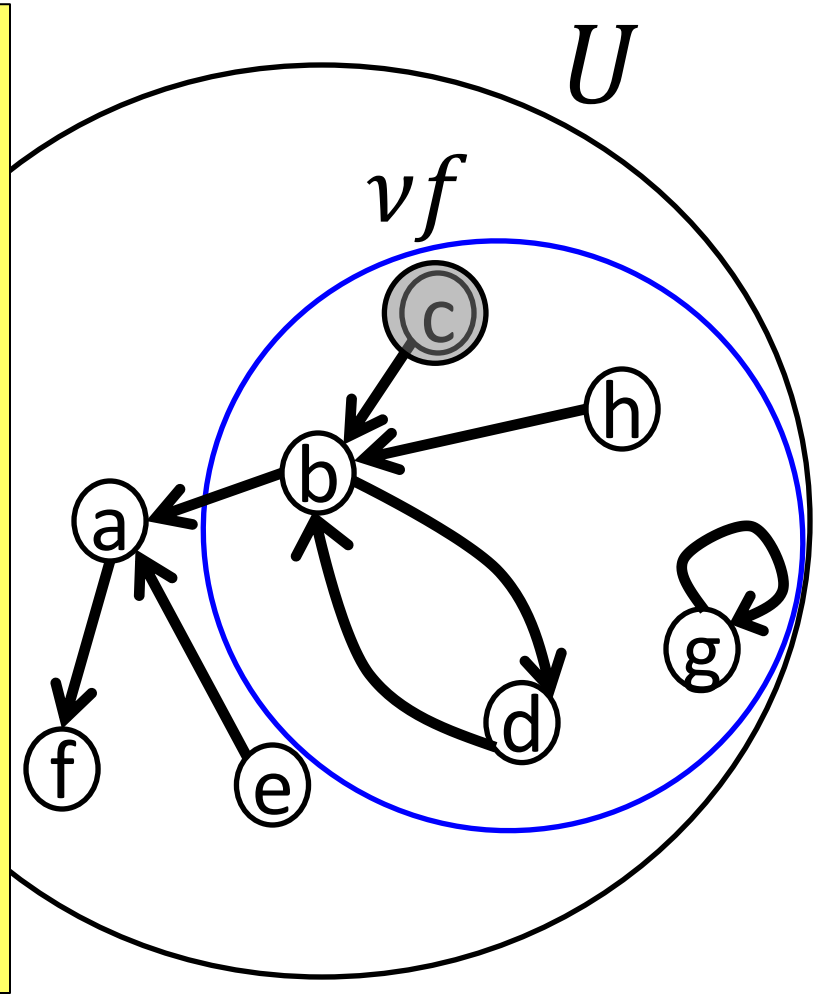
(Unfolding) $\mathrm{G}_f(Y) = f(Y \cup \mathrm{G}_f(Y))$

(Semantically Guarded Coinduction)

$$X \subseteq \mathrm{G}_f(Y) \iff X \subseteq \mathrm{G}_f(X \cup Y)$$

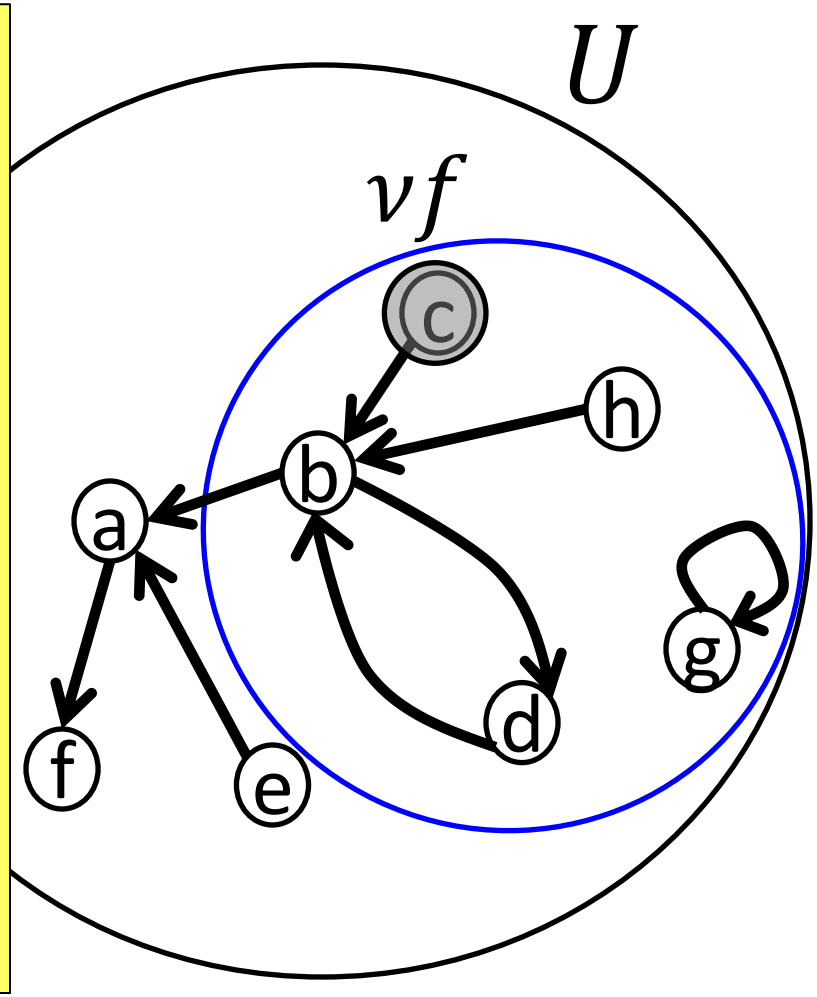
Example: Parameterized Coinduction

$\{c\} \subseteq \nu f$



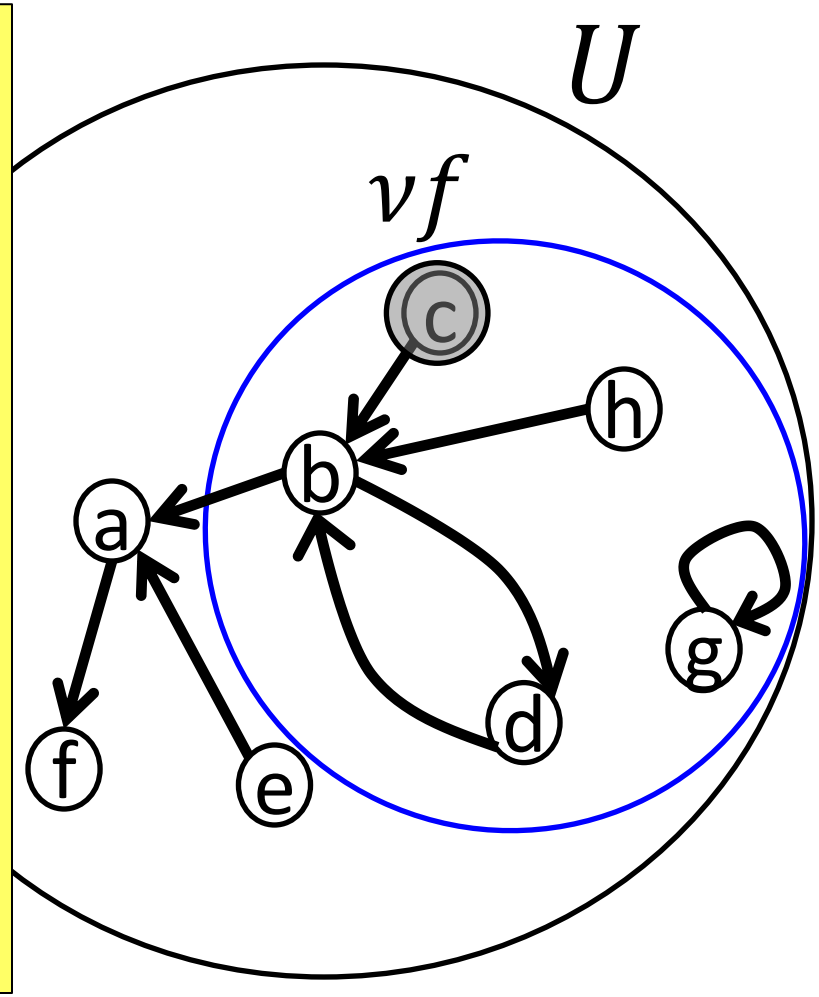
Example: Parameterized Coinduction

$\{c\} \subseteq G_f(\emptyset)$



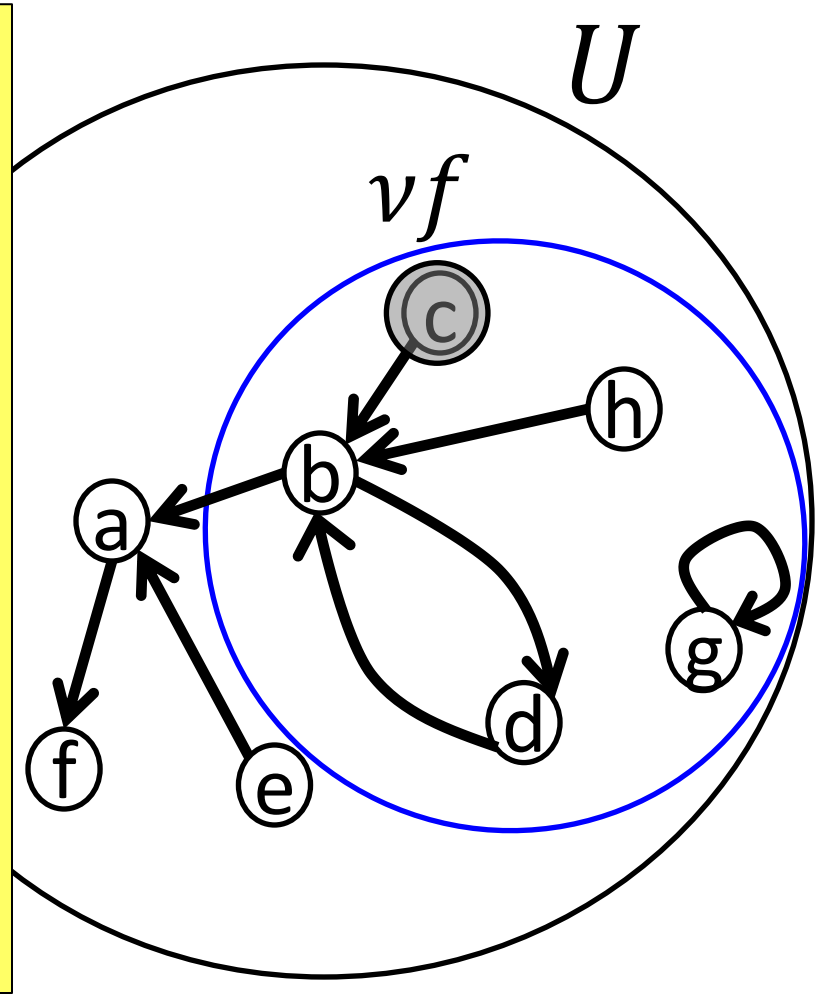
Example: Parameterized Coinduction

$$\frac{\{c\} \subseteq f(\emptyset \cup G_f(\emptyset))}{\{c\} \subseteq G_f(\emptyset)}$$



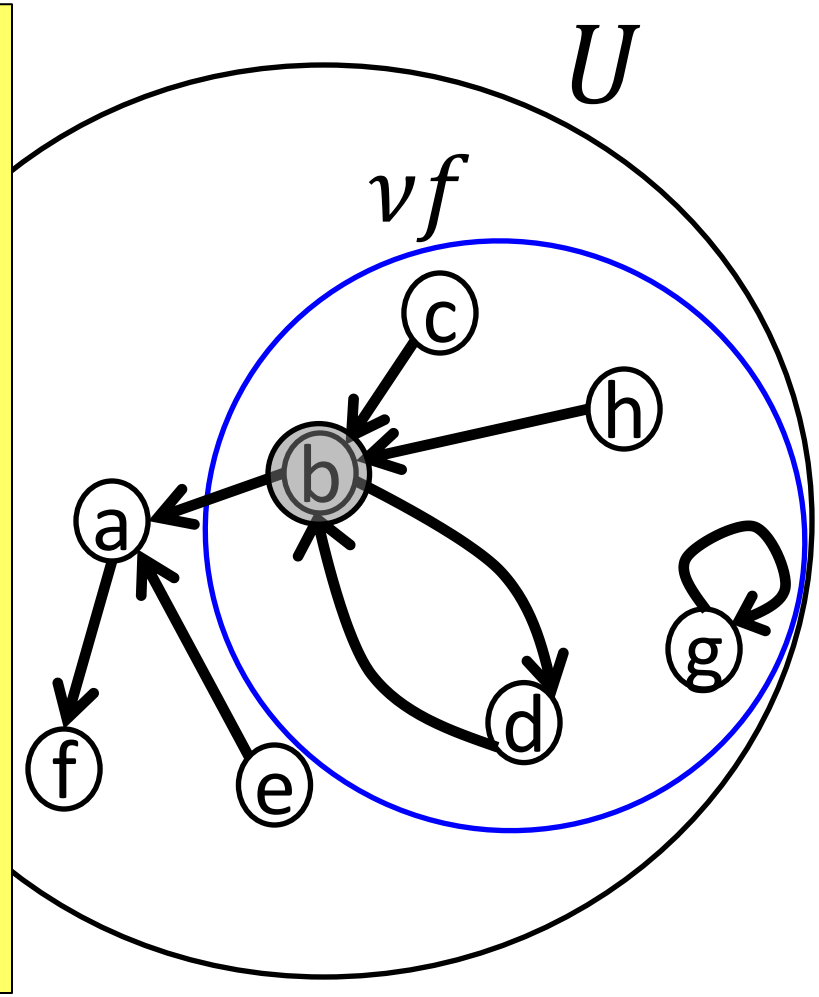
Example: Parameterized Coinduction

$$\frac{\exists y.\, \mathrm{c} \rightarrow y \wedge y \in (\emptyset \cup \mathrm{G}_f(\emptyset))}{\{\mathrm{c}\} \subseteq \mathrm{G}_f(\emptyset)}$$



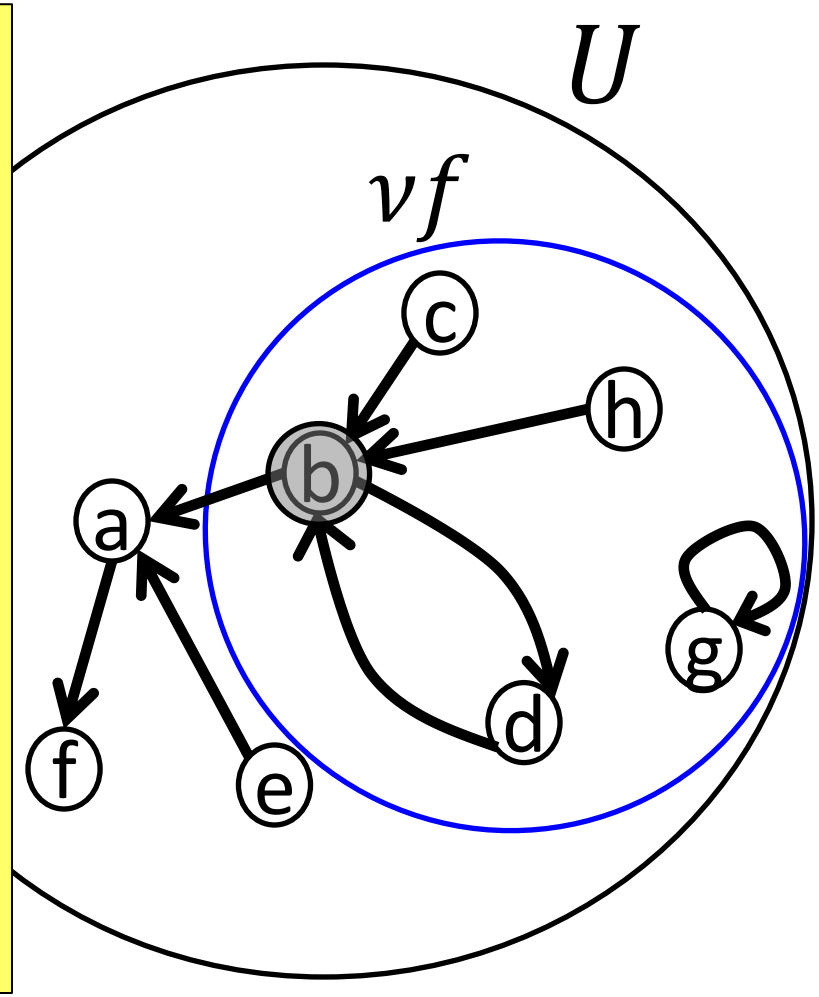
Example: Parameterized Coinduction

$$\frac{\exists y.\, \mathrm{c} \rightarrow y \wedge y \in (\emptyset \cup \mathrm{G}_f(\emptyset))}{\{\mathrm{c}\} \subseteq \mathrm{G}_f(\emptyset)}$$



Example: Parameterized Coinduction

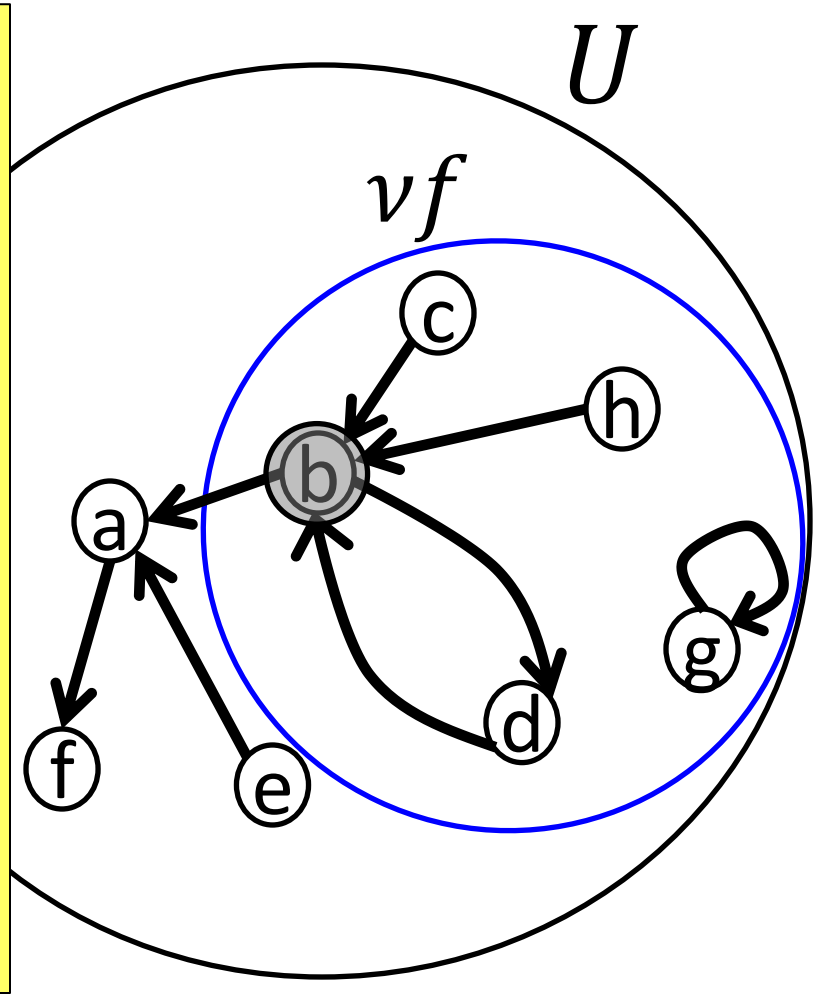
$$\frac{b \in (\emptyset \cup G_f(\emptyset))}{\{c\} \subseteq G_f(\emptyset)}$$



Example: Parameterized Coinduction

$$\frac{\{b\} \subseteq G_f(\emptyset)}{b \in (\emptyset \cup G_f(\emptyset))}$$

$$\frac{b \in (\emptyset \cup G_f(\emptyset))}{\{c\} \subseteq G_f(\emptyset)}$$



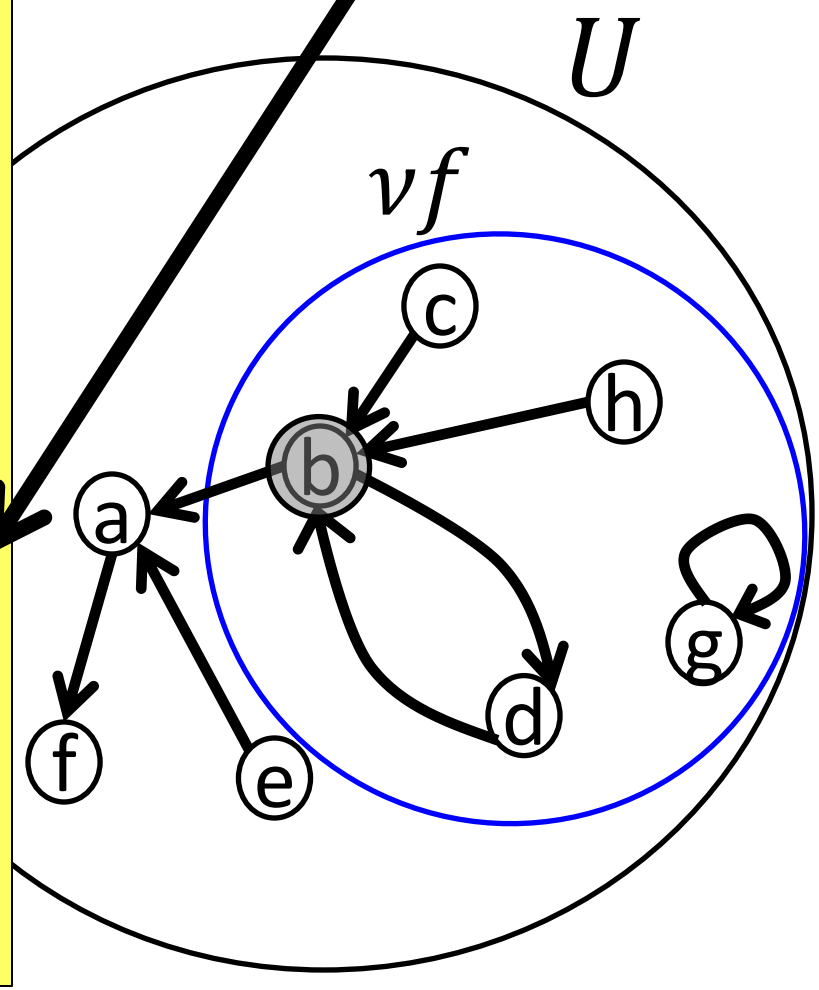
Examp
Parameterized C

By Semantically Guarded Coinduction

$$\frac{\{b\} \subseteq G_f(\{b\})}{\{b\} \subseteq G_f(\emptyset)}$$

$$\frac{\{b\} \subseteq G_f(\emptyset)}{b \in (\emptyset \cup G_f(\emptyset))}$$

$$\frac{b \in (\emptyset \cup G_f(\emptyset))}{\{c\} \subseteq G_f(\emptyset)}$$



Examp

Syntactic Guardedness is NOT Compositional

$$X \subseteq \nu f$$

Syntactic Guardedness is NOT Compositional

$$X \subseteq \nu f \Rightarrow Y \subseteq \nu f$$

$$Y \subseteq \nu f \Rightarrow X \subseteq \nu f$$

$$X \subseteq \nu f$$

Syntactic Guardedness is NOT Compositional

$\mathrm{pf}_1 : X \subseteq \nu f \Rightarrow Y \subseteq \nu f$ (pf_1 is guarded)

$\mathrm{pf}_2 : Y \subseteq \nu f \Rightarrow X \subseteq \nu f$ (pf_2 is guarded)

$$\frac{}{X \subseteq \nu f}$$

Not Expressible in the logic

$\mathrm{pf}_1 : X \subseteq \nu f \Rightarrow Y \subseteq \nu f$ (pf_1 is guarded)

$\mathrm{pf}_2 : Y \subseteq \nu f \Rightarrow X \subseteq \nu f$ (pf_2 is guarded)

$$\frac{}{X \subseteq \nu f}$$

Make Proofs Transparent

$\mathrm{pf}_1 : X \subseteq \nu f \Rightarrow Y \subseteq \nu f$

$\mathrm{pf}_2 : Y \subseteq \nu f \Rightarrow X \subseteq \nu f$

$$\frac{}{X \subseteq \nu f}$$

Make Proofs Transparent

$$\frac{\mathrm{pf}_1 : X \subseteq \nu f \Rightarrow Y \subseteq \nu f \qquad \mathrm{pf}_2 : Y \subseteq \nu f \Rightarrow X \subseteq \nu f}{\mathrm{pf}_2 \circ \mathrm{pf}_1 : X \subseteq \nu f \Rightarrow X \subseteq \nu f}$$

$$X \subseteq \nu f$$

Make Proofs Transparent

$$\frac{\mathrm{pf}_1 : X \subseteq \nu f \Rightarrow Y \subseteq \nu f \qquad \mathrm{pf}_2 : Y \subseteq \nu f \Rightarrow X \subseteq \nu f}{\mathrm{pf}_2 \circ \mathrm{pf}_1 : X \subseteq \nu f \Rightarrow X \subseteq \nu f} \; (\mathrm{pf}_2 \circ \mathrm{pf}_1 \text{ is guarded})$$

$$X \subseteq \nu f$$

Two Problems with Transparent Proofs

1. Slowdown
2. NO Abstraction

$$\frac{\mathrm{pf}_1 : X \subseteq \nu f \Rightarrow Y \subseteq \nu f \qquad \mathrm{pf}_2 : Y \subseteq \nu f \Rightarrow X \subseteq \nu f}{\mathrm{pf}_2 \circ \mathrm{pf}_1 : X \subseteq \nu f \Rightarrow X \subseteq \nu f} \; (\mathrm{pf}_2 \circ \mathrm{pf}_1 \text{ is guarded})$$

$$X \subseteq \nu f$$

Semantic Guardedness is Compositional

$$\frac{Y \subseteq \mathrm{G}_f(X) \qquad X \subseteq \mathrm{G}_f(Y)}{X \subseteq \mathrm{G}_f(\emptyset)}$$

Possible because
Guardedness can be expressed in the Logic!

$$\frac{Y \subseteq \mathrm{G}_f(X) \qquad X \subseteq \mathrm{G}_f(Y)}{X \subseteq \mathrm{G}_f(\emptyset)}$$

Problems with Syntactic Guardedness

1. Non-Compositional
2. Far from complete
3. Bad interaction with automation
4. Hard to debug
5. Slow

~~Problems with~~ Semantic Guardedness

1. Non-Compositional
2. Far from complete
3. Bad interaction with automation
4. Hard to debug
5. Slow
